The Safety Solutions Company:
committed to separating people
from hazards

Airport Safety Barrier Systems

There are two principal objectives of airport operation. The chief objective is the safety of the people brought to and from the location each day. The second vital objective is to keep people and goods coming and going in a smooth, continuous motion.

There are numerous barriers that obstruct the safety and flow of airport facilities. Unexpected emergencies, dangerous weather, inexperienced travelers, and disorderly growth are a few of the hindrances to a smooth flow of goods and people.

Coincidentally, barriers are an invaluable part of the solution. Barriers could enable you to hurdle the obstacles.

The use of physical barriers at your location will create order and improve safety. Guardrails and warning lines channel people in the right direction and keep individuals from entering unsafe areas. Barriers provide people with the knowledge of what they can and cannot do, making travelers and workers confident and comfortable.

Temporary and permanent barriers facilitate practical use of your existing space. Barriers make available space more efficient

and greatly streamline your resources.

Having the temporary barriers on hand for handling emergency situations will enable you to react to unexpected circumstances with confidence and control. Temporary barriers can reduce the number of workers needed necessary to maintain order and communicate directions.

Installing permanent barriers to protect people from everyday hazards will create a safe environment for workers and travelers. Guardrails are essential for safe walkways on rooftops and any raised ledges or platforms.

Kee Safety can assist you in accomplishing the safety goals you have set for your airport operation. We are committed to providing the highest quality in safety barrier solutions. Established in 1934, the product range has expanded from our original KEE KLAMP products into a portfolio of safety equipment, all designed to separate people from hazards.

providing design and
consultation services for
compliant safety solutions

Consultation Services

- Technical advice and solutions support
- Design solutions in CAD
- Cost estimates specific to project needs
- Site inspection Service

barrier railing system designed to meet ADA (Americans with Disabilities Act) requirements

ADA Compliant Safety Railing

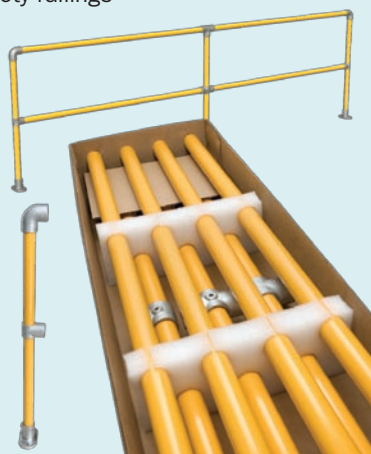

- Galvanized finish for long-lasting protection
- Eliminates expensive fabrication
- TÜV approved
- Can be used to retrofit existing rail

quick assembly safety railings available in straight, corner, and extension kits

KWIKKIT Rail System

- No welding, bending or threading on site
- Available in steel, utilizes KEE KLAMP galvanized safety components or
- Available in aluminum, utilizing KEE LITE aluminum safety components
- Meets or exceeds OSHA requirements for safety railings

modular demarcation system perfect for temporary needs and quick setups

Demarcation Lines

- Quick set-up, modular, free-standing
- Durable galvanized components and uprights
- Vinyl coated stainless steel cable for long lasting protection
- Exceeds OSHA standard for warning lines
- Heavy-duty recycled rubber bases

portable, free standing roof edge railing system that does not penetrate the roof membrane

CONTRACTOR

KEEGUARD Contractor

- Cost effective modular safety rail system
- Easily assembled without specialized workers or equipment
- Durable galvanized components and uprights, and bases
- Components and railings can be powder coated to any RAL color

permanent, free standing roof edge railing system that does not penetrate the roof membrane

Rooftop Fall Protection

- Exceeds current safety requirements for roof edge protection
- Pre-fabricated modular design
- Free standing system, no penetration of the roof membrane
- Galvanized for long lasting protection
- Recycled PVC counterbalances
