The principle is simple yet highly effective, proven over 80 years in thousands of completed projects across the globe. Whether you need to separate people from hazards or protect your equipment on site, Kee Safety offers the most cost effective, flexible and safe solutions to your barrier requirements.

## Safety

Kee Safety regularly monitors all new safety standards and directives to ensure the highest protection. Our systems not only meet but also exceed the current safety requirements and our components comply with the latest USA Building Regulations and Standards.

## KeeKlamp ${ }^{\circ}$

An innovative product for the construction of steel tubular structures. Kee Klamp ${ }^{\circledR}$ components are galvanized cast iron for strength and corrosion resistance.

## Quality

Quality is the overriding priority when manufacturing Kee Safety components. Components are manufactured to strict specifications and TÜV certified for strength, manufacturing quality and consistency.

The Kee Klamp access range of galvanized cast iron components are suitable for railings, stairs, ramps and walkways. They are specially designed for disabled access, meeting the requirements of the
Americans with
Disabilities Act.

## Solutions

From simple protection for loading bays or safety walkways in factories, to safety barriers in aggressive coastal environments or the protection of road bridges and culverts, Kee Safety provides you with confidence that you are compliant with safety requirements.

## Kee Lite

Components manufactured from a polished high grade Aluminum alloy for the construction of lightweight tubular structures.
Kee Lite ${ }^{\oplus}$ components
offer superior corrosion
resistance, strength and durability.

## KeeKlamp

Kee Klamp components are iron castings manufactured to the requirements of BS EN 1562 and 1563.

Kee Klamp component have the the widest seletion composing a range of components to suit seven different sizes of pipe.

Hexagon socket set screws firmly lock the component to the pipe. Set screws are manufactured in case hardened steel and are protected against corrosion with Kee Koat. This ensures that tubular structures achieve longer life and better corrosion resistance.

A Kee Klamp component (size 5 to 9 ) can support an axial load of 2000lbs. per set screw with the set screw tightened to a torque of 39 Nm or 29 ft.lbs; rating includes a safety factor of 2:1.
This is normally obtained when the set screw is fully tightened using a ratchet wrench.

## 10

## Single Socket Tee

This component creates a $90^{\circ}$ perpendicular joint between two pipes.

## A10

Split Single Socket Tee
Designed to allow additions or extensions to existing structures, this component creates a $90^{\circ}$ perpendicular joint between two pipes without the need for dismantling. This component has strength and function comparable the standard Type 10.

12
Single Socket Tee (45 ${ }^{\circ}$ )
Engineered to create $45^{\circ}$ angle, this component is most frequently used for bracing and struts.

| TYPE | Pipe ref. |  | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $A$ | $B$ | $D$ | $E$ |  |
| $10-3$ | 3 | 3 | 1.13 | 0.94 | 0.15 |
| $10-4$ | 4 | 4 | 1.36 | 1.20 | 0.29 |
| $10-5$ | 5 | 5 | 1.63 | 1.47 | 0.51 |
| $10-6$ | 6 | 6 | 1.81 | 1.84 | 0.64 |
| $10-65$ | 6 | 5 | 1.75 | 1.42 | 0.55 |
| $10-67$ | 6 | 7 | 2.20 | 2.06 | 0.95 |
| $10-7$ | 7 | 7 | 2.38 | 2.16 | 0.99 |

| $12-8$ | 8 | 2.36 | 4.25 | 1.58 | 2.02 |

## A12

## Split Single Socket

 Tee (45 ${ }^{\circ}$ )The hinge and pin system of this component enables existing structures to be easily extended without the need for dismantling. This component is most frequently used for bracing and struts.

## 14

## Straight Coupling

Designed to form an in-line joint between two pieces of pipe of the same size. The Type 14 Straight Coupling creates a join on the outside of the pipe and is stronger than internal couplings.

| TYPE | Pipe ref. <br> $A$ | in. | lb. |
| :---: | :---: | :---: | :---: |
| $14-4$ | 4 | 2.28 | 0.31 |
| $14-5$ | 5 | 3.03 | 0.60 |
| $14-6$ | 6 | 3.50 | 0.86 |
| $14-7$ | 7 | 4.01 | 1.15 |
| $14-8$ | 8 | 4.09 | 1.41 |
| $14-9$ | 9 | 4.88 | 2.38 |

## 15

Elbow (90 ${ }^{\circ}$ )
This elbow creates a $90^{\circ}$ joint between two pieces of pipe.

## 16

## Clamp-on Tee

Widely used for adding to and modifying existing structures, this component performs the same function as a Type 10. Because of its open socket, it can be added to a complete structure. The hex head bolt is for retaining purposes only and should be tightened to 15 Nm .

## 17

## Clamp-on Crossover

Designed to provide a $90^{\circ}$ crossover joint. Can be added to an existing structure. Pipe should not be joined within this component. For an alternative component, see Type 45 or Type A45.

| TYPE | Pipe ref. |  | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :--- |
| $A$ | $B$ | $D$ | $E$ |  |  |
| $17-5$ | 5 |  | 1.06 | 1.61 | 0.33 |
| $17-6$ | 6 |  | 1.34 | 1.89 | 0.51 |
| $17-7$ | 7 |  | 1.69 | 2.48 | 0.95 |
| $17-8$ | 8 |  | 1.93 | 2.68 | 1.23 |
| $17-9$ | 9 | 2.40 | 3.07 | 1.98 |  |

## 18

## Internal Coupling

The Internal Coupling creates a flush joint between two pipes of the same diameter. This component should not be used where a direct tensile load is applied.

## 19

## Adjustable Side Outlet Tee

Used in pairs to form variable angle joints between $90^{\circ}$ and $180^{\circ}$. Type 19-8T can produce an angle range between $81^{\circ}$ and $180^{\circ}$.

| TYPE | Pipe ref. <br> $A$ | in. | lb. |
| :---: | :---: | :---: | :---: |
| $15-4$ | 4 | 1.33 | 0.29 |
| $15-5$ | 5 | 1.61 | 0.60 |
| $15-6$ | 6 | 1.81 | 0.86 |
| $15-7$ | 7 | 2.36 | 1.48 |
| $15-8$ | 8 | 2.67 | 1.70 |
| $15-9$ | 9 | 3.34 | 2.82 |

| TYPE | Pipe ref. | in. | lb. |
| :---: | :---: | :---: | :--- |
| $\mathbf{A}$ | $D$ |  |  |
| $16-5$ | 5 | 1.97 | 0.64 |
| $16-6$ | 6 | 2.09 | 0.73 |
| $16-7$ | 7 | 2.64 | 1.30 |
| $16-8$ | 8 | 3.03 | 1.32 |
| $16-9$ | 9 | 3.54 | 2.03 |

Note: This component can only be used with Schedule 40 pipe.

|  | Pipe ref. |  | in. |  | lb. |

| $19-9$ | 9 | 9 | 4.33 | 1.93 | 2.18 |

## 20

## Side Outlet Elbow

This component creates a $90^{\circ}$ corner joint for three pieces of pipe. Most frequently used for the top-rail of safety railing, it can also be considered for the corner joint of benches, work tables, and other rectangular structures.

## 21

## Side Outlet Tee (90ㅇ)

Most frequently paired with Type 20 to give a $90^{\circ}$ corner joint for the middle rail of safety railing and other rectangular structures. The upright passes through the component.

## A21/A26

Split Two socket Cross/ Side Outlet Tee ( $\mathbf{9 0}^{\circ}$ )
This component performs the same function as either Type 21 or Type 26. Because of its hinge and pin system, it can be added to an existing tubular assembly. Type A21/A26 components are supplied and priced as a kit that includes two castings and two taper pins, which can be assembled in either configuration.

## 25

## Three Socket Tee

The Three Socket Tee will join three pipes together in a $90^{\circ}$ perpendicular joint. The two set screws in the sleeve will allow two pipes to be coupled together. This components is most commonly used between the top-rail and an intermediate upright on safety railing.

## 26

## Two Socket Cross

Usually paired with Type 25 to give a $90^{\circ}$ joint between the middle rail and an intermediate upright on safety railing. The upright passes through the component.

| TYPE | Pipe ref. <br> $A$ | in. | Ib. |
| :---: | :---: | :---: | :---: |
| $21-4$ | 4 | 1.34 | 0.31 |
| $21-5$ | 5 | 1.61 | 0.62 |
| $21-6$ | 6 | 1.81 | 0.90 |
| $21-7$ | 7 | 2.36 | 1.52 |

| $26-87$ | 8 | 7 | 4.96 | 1.39 |
| $26-9$ | 9 | 9 | 6.61 | 3.22 |

## 29

## Single Socket Tee ( $30^{\circ}-60^{\circ}$ )

Designed as an alternative to Type 12 , this adjustable component is most frequently used for bracing and struts. It may be used at any angle between $30^{\circ}$ and $60^{\circ}$. See diagram on page 59.

## 30

## Adjustable Cross ( $30^{\circ}-45^{\circ}$ )

This adjustable component can be used for railing on staircases between the mid-rail and an intermediate upright which is required to remain vertical. It may be used at any selected angle between $30^{\circ}$ and $45^{\circ}$.

## 31

## Pallet Flange

This component has been designed for the construction of post pallets. Incorporates sockets for the upright and side pipes, and a locating bell for stacking pallets. (Special order only.)

| TYPE | Pipe ref. <br> $A$ | in. | lb. |
| :---: | :---: | :---: | :---: |
| $30-6$ | 6 | 5.75 | 1.41 |

| A | $D$ | $E$ | $F$ |  |  |
| $31-8$ | 8 | 2.99 | 5 | 4.53 | 4.41 |

## 32

## Decorative Ball

Our Decorative Ball cap is an aesthetic component suitable for handrails used for pedestrian traffic and municipal areas. The component also serves a functional purpose in discouraging skateboarders and other pedestrian traffic from sliding across a railing.

## 35

## Three Socket Cross

Most frequently used to connect uprights with horizontal pipes in three directions, all at $90^{\circ}$ to the upright. The upright passes through the component.

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ |  |  |
| $35-4$ | 4 | 1.34 | 2.68 | 0.44 |
| $35-5$ | 5 | 1.61 | 3.23 | 0.77 |
| $35-6$ | 6 | 1.81 | 3.62 | 0.99 |
| $35-7$ | 7 | 2.36 | 4.72 | 1.70 |
| $35-8$ | 8 | 2.68 | 5.35 | 2.62 |
| $35-9$ | 9 | 3.35 | 6.61 | 4.04 |

## A35

Split Three Socket Cross
The hinge and pin system of this component enables existing structures to be easily extended without the need for dismantling. This component has been designed to connect an upright with horizontal pipes in three directions, all at $90^{\circ}$ to the upright. The upright passes through the component.

| TYPE | Pipe ref. | in. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | D | $E$ | $F$ | $G$ | Ib. |  |
| A35-8 | 8 | 3.46 | 6.93 | 2.17 | 2.36 | 3.46 |

## 40

## Four Socket Cross

Most frequently used in multiple upright structures to tie a centre upright with horizontal pipes in four directions. The upright passes through the component.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: |
| $40-4$ | 4 | 1.34 | 2.64 | 0.6 |
| $40-5$ | 5 | 1.26 | 3.23 | 1.12 |
| $40-6$ | 6 | 1.46 | 3.62 | 1.32 |
| $40-7$ | 7 | 1.81 | 4.72 | 2.32 |
| $40-8$ | 8 | 2.09 | 5.35 | 3.22 |
| $40-9$ | 9 | 2.44 | 6.61 | 5.07 |

## A40

## Split Four Socket Cross

The hinge and pin system of this component enables existing structures to be easily extended without the need for dismantling. This component is most frequently used in multiple upright structures to tie a centre upright with horizonta pipes in four directions. The upright passes through the component.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | A0-8 | 8 | 2.36 | $E$ | F |

## 45

## Crossover

Designed to create a $90^{\circ}$ crossover joint. Frequently used to minimise pipe cuts and create a continuous horizontal for safety railing. It may also be used to create intermediate levels on racks, when horizontal connections between uprights are not required.

| TYPE | Pipe ref. |  | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $45-3$ | 3 | $B$ | $D$ | $E$ |  |
| $45-4$ | 4 | 4 | 0.98 | 1.10 | 0.34 |
| $45-5$ | 5 | 5 | 1.34 | 1.22 | 0.45 |
| $45-6$ | 6 | 6 | 1.57 | 1.50 | 0.76 |
| $45-65$ | 6 | 5 | 1.42 | 1.69 | 0.64 |
| $45-7$ | 7 | 7 | 2.13 | 1.81 | 1.18 |
| $45-76$ | 7 | 6 | 1.77 | 1.81 | 0.99 |
| $45-8$ | 8 | 8 | 2.17 | 2.01 | 1.30 |
| $45-86$ | 8 | 6 | 1.89 | 2.00 | 1.00 |
| $45-87$ | 8 | 7 | 2.01 | 2.00 | 1.20 |
| $45-9$ | 9 | 9 | 2.64 | 2.40 | 2.00 |
| $45-98$ | 9 | 8 | 2.36 | 2.99 | 2.40 |

## A45

## Split Crossover

The unique hinge and pin system of this component enables existing structures to be easily extended without the need for dismantling. This component is designed to give a $90^{\circ}$ offset crossover joint. Pipe should not be joined within the component. Type A45 function is comparable to Type 45 component.

## 46

## Combination Socket Tee and Crossover

Used on racking to join horizontal carrying rails to the upright, leaving the socket to take a horizontal tie across the section. For shelved racking it is usual to have the horizontal pipe outside the upright. On pallet racking it is preferable to have the carrying rails inside the upright.

| TYPE | Pipe ref. | in. | lb. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $A$ | $D$ | $E$ | $F$ | lb. |  |
| $46-4$ | 4 | 1.34 | 1.10 | 0.98 | 0.33 |
| $46-5$ | 5 | 1.61 | 1.22 | 1.34 | 0.66 |
| $46-6$ | 6 | 1.81 | 1.50 | 1.57 | 1.08 |
| $46-7$ | 7 | 2.36 | 1.81 | 1.93 | 1.52 |
| $46-8$ | 8 | 2.68 | 2.01 | 2.17 | 2.01 |
| $46-9$ | 9 | 3.35 | 2.40 | 2.64 | 3.40 |

## Swivel Components

Types F50, M50, MH50, M51, MH51, M52, M53 and M58 are known as swivel components and can be assembled as Types C50, CH50, C51, C52, C53 and C58, or supplied as separate items. They are frequently used for bracing but can also overcome problems where joints are required at angles other than those achieved by fixed angle components. For economical use of piping, when making ' C ' components, or combination components, Types F50 (sizes 5 to 9 only) can be combined with different sizes of Types M50, MH50, M51, MH51, M52, M53 and M58. F50-4 and M50-4 will only combine with each other.

MARNING: An entire structure should not be constructed from swivel components, as they would not provide sufficient stability or rigidity in the structure. Ty

## C50

## Single Swivel Socket

This complete combination component creates a range of $170^{\circ}$. See Types F50 and M50 for individual component specifications. See the 'Swivel Components' box for more information.

| TYPE | A Pipe ref. | Ib. |  |
| :---: | :---: | :---: | :---: |
| C50-44 | 4 | 4 | 0.33 |
| C50-55 | 5 | 5 | 1.23 |
| C50-66 | 6 | 6 | 1.41 |
| C50-77 | 7 | 7 | 1.76 |
| C50-88 | 8 | 8 | 2.01 |
| C50-99 | 9 | 9 | 2.69 |

## F50

## Female Single Swivel Socket Member

One part of combination component C50. The Type F50 in size 4 has only one ear, while Type F50 in sizes 5 to 9 has two ears.

Note: Type F50-4 will only mate with a Type M50-4.

## M50

## Male Single Swivel Socket Member

One part of combination component C50. This can also be used for attaching flat panels to tubular structures.

|  | TYPE | Pipe ref. | in. |  |  |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: | :--- | :---: | :---: |
| M50-4 | 4 | 1.02 | 0.76 | 0.43 | 0.25 | 0.13 |  |  |
| M50-5 | 5 | 1.57 | 1.57 | 0.75 | 0.39 | 0.53 |  |  |
| M50-6 | 6 | 1.69 | 1.57 | 0.75 | 0.39 | 0.60 |  |  |
| M50-7 | 7 | 1.89 | 1.85 | 0.75 | 0.39 | 0.79 |  |  |
| M50-8 | 8 | 2.13 | 1.85 | 0.75 | 0.39 | 0.92 |  |  |
| M50-9 | 9 | 2.44 | 2.05 | 0.75 | 0.39 | 1.19 |  |  |

$\emptyset$ indicates the diameter of the fixing hole.
Note: Type M50-4 will only mate with a
Type F50-4.

## MH50

## Male Single Horizontal Swivel Socket Member

This component can be used for attaching flat panels to tubular structures. Specially designed for retail shelving applications. Can also be used as part of a Type CH50 combination component.

## P50

## Single Offset Panel Tab

Designed for the securing of various types of panels and flooring to pipe structures (i.e. plywood, plastic sheeting, wood planking, etc.). This component has one offset flange to allow the flush attachment of panels to pipe. Often used with Type P51. See also Type P57.

## C51

## Double Swivel Socket

This complete combination component creates a range of $170^{\circ}$ on both sides of the upright. Type C51 is made by combining two Type F50 components and one Type M51. For dimensions refer to Type F50 and Type M51. See the ‘Swivel Components’ box for more information.

## M51

Male Double Swivel Socket Member

One part of a Type C51 combination component. This component can also be used for attaching flat panels to tubular structures.

## MH51

Male Double Horizontal Swivel Socket Member

This component can be used for attaching flat panels to tubular structures. Specially designed for retail shelving applications, the MH51 can be used as part of a CH51 combination component.

$\emptyset$ indicates the diameter of the fixing hole.

## P51

## Double Offset Panel Tab

Designed for the secure component of various types of panels and flooring to pipe structures (i.e. plywood, plastic sheeting, wood planking, etc.) This component has two offset flanges to allow the flush attachment of panels to pipe.

## C52

## Corner Swivel Socket

Complete combination component. Reducing combinations of Type C52 are available sizes 5 to 8. For dimensions refer to Type F50 and Type M52. See the 'Swivel Components' box for more information.

## M52

## Male Corner Swivel Socket Member

One part of a Type C52 combination component. This can also be used for attaching flat panels to tubular structures.

## BC53

## Swivel Elbow

Type BC53 component has been designed as a variable angle in-line connection, adjustable through $272^{\circ}$.

## C53

## Adjustable Three Way Swivel Socket

Complete combination component. Type C53 is made by combining two Type M53 and two Type F50 components. For dimensions refer to Type F50 and type M53. See the 'Swivel Components' box for more information.

| TYPE | Pipe ref. |  |  | lb. |

| $\emptyset$ indicates the diameter of the fixing hole. |  |  |  |  |  |  |

## 55

## Obtuse Angle Elbow

The Type 55 is an ideal component to use as an alternative to bending, or when a junction between a sloping pipe and an end post is required, i.e. guardrail and staircases. (Refer to page 59 for more information.)

## 55A

## Variable Elbow <br> $\left(11^{\circ}-30^{\circ}\right)$

The Type 55A is an ideal component to use as an alternative to bending or when a junction between a sloping pipe and an end post is required.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: |
| 55A-7 | 7 | $D$ | $E$ | 2.16 |
| 5.53 | 2.2 |  |  |  |
| $55 A-8$ | 8 | 2.36 | 5.90 | 2.82 |

## 56

## Acute Angle Elbow ( $30^{\circ}-45^{\circ}$ )

Type 56 is an ideal component to use as an alternative to bending, or when a junction between a sloping pipe and an end post is required, i.e. guardrail and staircases. (Refer to page 59 for more information.)

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ |  |  |
| $56-7$ | 7 | 4.13 | 3.90 | 3.90 | 2.16 |
| $56-8$ | 8 | 5.28 | 4.41 | 4.41 | 2.92 |

## 56A

## Acute Angle Elbow

## ( $11^{\circ}-30^{\circ}$ )

Type 56A is an ideal component to use as an alternative to bending, or when a junction between a sloping pipe and an end post is required i.e. guardrail on staircases between $11^{\circ}$ and $30^{\circ}$.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ |  |  |
| $56 A-7$ | 7 | 4.72 | 4.26 | 4.26 | 2.07 |
| $56 A-8$ | 8 | 4.92 | 4.41 | 4.41 | 2.46 |

## P57

## Single Panel Tab

Designed for the securing of various types of panels and flooring to pipe structures (i.e. plywood, plastic sheeting, wood planking, etc.). This component has a single offset flange to allow for the attachment of panels to pipe. See Type P50.

## P57E

## Single Extended Panel Tab

This component is similar to the P578 but has an elongated offset flange with a fixing hole rather than a slot.

## C58

## Swivel Flange

A swivel component for attachment of angled piping to a flat surface. For dimensions refer to Type F50 and Type M58.
 $\emptyset$ indicates the diameter of the fixing hole.

## M58

## Swivel Flange Plate

This component may be considered for various wall and brace fixings. It is often combined with Type F50 to give an adjustable angle component Type C58. The diameter of the attachment bolt hole is 0.39 inches (10mm).

## P58

## Double Extended Panel

## Tab

This component is designed for securing various types of panels and flooring to tubular structures. It has central flanges with fixing holes.

| TYPE | Pipe ref. | lb. |
| :---: | :---: | :---: |
| C58-5 | $A$ | 1.54 |
| C58-6 | 5 | 1.68 |
| C58-7 | 6 | 1.85 |
| C58-8 | 7 | 2.07 |
| C58-9 | 8 | 2.36 |

WARNING: C58 is not recommended for use as a base flange to support guardrail, balustrades or other types of structure.

$\emptyset$ indicates the diameter of the fixing hole.

## 59

## Spigot Flange

A spigot flange which fits inside the pipe and is not secured by a socket screw. Type 59 can only be used with a pipe wall thickness of $1 / 8^{\prime \prime}$ and in light, self supporting structures.

| TYPE | Pipe ref. | in. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $A$ | $D$ | $E$ | $F$ | $G$ | lb. |
| $59-5$ | 5 | 0.75 | 3.19 | 1.10 | 0.71 | 0.73 |
| $59-6$ | 6 | 1.02 | 3.43 | 1.26 | 0.87 | 0.88 |
| $59-7$ | 7 | 1.30 | 3.86 | 1.34 | 1.00 | 1.32 |
| $59-8$ | 8 | 1.50 | 4.09 | 2.05 | 1.18 | 1.87 |

Note: No fixing holes are provided in this component.

| TYPE | Pipe ref. | in. |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ | $G$ | 0 | lb. |  |
| $60-5$ | 5 | 0.55 | 5.12 | 2.52 | 3.11 | 0.31 | 2.54 |
| $60-6$ | 6 | 0.55 | 5.51 | 2.52 | 3.39 | 0.31 | 2.54 |
| $60-7$ | 7 | 0.55 | 5.87 | 2.52 | 3.74 | 0.31 | 2.87 |
| $60-8$ | 8 | 0.55 | 6.18 | 2.52 | 4.02 | 0.31 | 3.26 |

$\emptyset$ indicates the diameter of the fixing hole.
WARNING: This component is not
recommended for use as a base flange to support guardrail or balustrades (see Type 62).

| TYPE | Pipe ref. | in. |  |  |  |  |  |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- | :---: | :---: | :---: |
| $61-3$ | $D$ | $E$ | $F$ | $G$ | 0 |  |  |  |  |  |
| $61-4$ | 4 | 0.25 | 2.76 | 1.26 | 1.85 | 0.26 | 0.42 |  |  |  |
| $61-5$ | 5 | 0.25 | 3.07 | 1.54 | 2.13 | 0.26 | 0.51 |  |  |  |
| $61-6$ | 6 | 0.25 | 3.54 | 1.57 | 2.24 | 0.26 | 0.52 |  |  |  |
| $61-7$ | 7 | 0.25 | 4.02 | 2.01 | 2.99 | 0.31 | 1.10 |  |  |  |
| $61-8$ | 8 | 0.25 | 4.53 | 2.32 | 3.50 | 0.31 | 1.48 |  |  |  |
| $61-9$ | 9 | 0.39 | 5.00 | 2.48 | 3.74 | 0.39 | 2.38 |  |  |  |

$\emptyset$ indicates the diameter of the fixing hole.
4.

WARNING: This component is not
recommended for use as a base flange to support guardrail or balustrades (see Type 63).

## 62

## Standard Railing Flange

Ideal when a structural fixing is required for guard rail and balustrades. The holes are of sufficient diameter to ensure proper fixing with either a mechanical or chemical anchor. The two set screws in the vertical socket give greater side-load stability to the upright. It is recommended that the fixing holes in the flange should be in line with the applied load (refer to table on page 63).

## 63

## Angle Base Flange ( $45^{\circ}-60^{\circ}$ )

Similar to Type 62, but used to set up the upright at an angle between $45^{\circ}$ to $60^{\circ}$. This component should only be subjected to light loads which cannot be positioned at $90^{\circ}$ to the applied load. For greater loads or other pipe sizes, a Type 62 flange is used and the upright bent to the required angle (refer to table on page 63).

| TYPE | Pipe ref. | in. |  |  |  |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| $63-6$ | 6 |  | 3.07 | $E$ | $F$ | $F$ | $G$ | $H$ |

$\emptyset$ indicates the diameter of the fixing hole.

## Standard Vertical Railing Flange

For fixing guardrail and balustrades to walls, parapets, steps, and ramps. The upright cannot drop through the socket. The max. length of top bolt (inc. the head) must not exceed $1^{\prime \prime}$, also applies to projecting fixed studs (refer to table on page 63).

## 65

## Standard Horizontal Railing Flange

This component is designed for palm fixing guardrailing and balustrading to walls, parapets, steps and ramps. The upright cannot drop through the socket (refer to table on page 63).

## 66

## Ground Socket

A ground socket component for setting in concrete. The posts may either be permanent or removable as required. It incorporates a socket set screw fixing and can be supplied with a plug to fill the hole when the pipe is removed (refer to table on page 63).

## 67

## Angle Flange

Type 67 has been designed to allow the upright to pivot in the barrel, providing an angular displacement from $3^{\circ}$ up to a maximum of $11^{\circ}$, measured from the vertical. Ideal to secure balustrade and guardrail systems on access ramps or other types of slopes (refer to table on page 63).

Wall Flange
Side fixing for guardrailing and balustrading to walls, parapets, steps and ramps. The upright cannot drop through the socket (refer to table on page 63).

$\emptyset$ indicates the diameter of the fixing hole.

Note: Should an upright be required to pass through the component, the base can be bored out to order.

Note: Should an upright be required to pass through the component, the base can be bored out to order.

| TYPE | Pipe ref. | in. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ | $G$ | lb. |  |
| $66-6$ | 6 | 5.00 | 4.84 | 0.43 | 4.53 | 4.12 |
| $66-7$ | 7 | 5.51 | 5.35 | 0.43 | 5.00 | 5.12 |
| $66-8$ | 8 | 5.51 | 5.35 | 0.43 | 5.00 | 5.51 |

Note: It is generally recommended that, when installing the 67-8, the fixing holes in the base should be in line with the applied load.

$\emptyset$ indicates the diameter of the fixing hole.

Note: If the upright is required to pass through the
component by machining out the base stop, the bottom fixing hole will be unusable.

## 69

## Railing Flange with Toeboard Adaptor

For guardrail and balustrade applications with added toeboard at base. Base plate holes have sufficient diameter to allow for attachment with either a mechanical or chemical anchor. Side plates have slotted holes to allow for a degree of sideways movement for ease of installation (refer to table on page 54).

## 70

## Rail Support

Designed to carry handrails along walls or to fix structures back to walls. The pipe passes through the component and cannot be used as a couploing. The Type 70 is also used to attach toeboards to the base of guardrail uprights. Holes provided for countersunk flat head screw fixings only.

## 71

## Weather Cap

Designed for roof guardrailing to ensure a weathertight seal for base flanges. The weather cap is secured to the upright by means of a combined sealant adhesive. A separate information sheet detailing fixing instructions is available on request.

## 72

## Stair Tread Support

Suitable for most types of stair tread, including timber, open steel and checker plate. Fixing of the tread is by two bolt holes in each component.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $71-6$ | 6 | 4.92 | 5.93 | 0.98 | 0.53 |
| $71-7$ | 7 | 5.91 | 6.06 | 0.98 | 0.71 |
| $71-8$ | 8 | 6.10 | 6.57 | 0.98 | 0.79 |

$\emptyset$ indicates the diameter of the fixing hole.

$\varnothing$ indicates the diameter of the fixing hole.

|  | Pipe ref. | in. |  |  |  |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| TYPE | $A$ | $D$ | $E$ | $F$ | $G$ | $H$ | 0 |  |
| $70-5$ | 5 | 2.17 | 3.07 | 1.81 | 2.24 | 1.18 | 0.31 | 0.79 |
| $70-6$ | 6 | 2.28 | 3.46 | 1.57 | 2.76 | 1.18 | 0.31 | 0.97 |
| $70-7$ | 7 | 2.52 | 4.02 | 1.81 | 3.00 | 1.34 | 0.31 | 1.23 |
| $70-8$ | 8 | 2.76 | 4.25 | 2.05 | 3.38 | 1.34 | 0.31 | 1.72 |

$\emptyset$ indicates the diameter of the fixing hole.
WARNING: Type 70 components are not designed to be used as base flanges for full height guardrails or handrails.

| TYPE | Pipe ref. | in. |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ | $G$ | $H$ | $J$ | O | lb. |  |
| $72-8$ | 8 | 7.99 | 1.54 | 2.01 | 5.98 | 0.75 | 1.30 | 0.43 | 2.76 | $\emptyset$ indicates the diameter of the fixing hole.

WARNING: If Type 72 components are to be used for a permanent application or subjected to high loads, the stair tread support pipe which is located at its ends with a single set screw, should be drilled and pinned to avoid rotational slip.

## 75

## Collar

Commonly used to support anothe component if the latter is required to be left untightened, such as gate hinges. Type 75 also provides additional support when the loading on a structure exceeds the maximum permitted slip load for a socket set screw.

| TYPE | Pipe ref. | $\begin{gathered} \text { in. } \\ D \end{gathered}$ | lb. |
| :---: | :---: | :---: | :---: |
| 75-4 | 4 | 0.91 | 0.11 |

| $76-7$ | 7 | 1.50 | 1.06 | 0.51 | 0.51 |
| $76-8$ | 8 | 1.61 | 1.06 | 0.51 | 0.53 |

## 133

## Plastic Plug

A grey plastic plug to fit open ended pipes. Suitable for medium and heavy piping only. For an alternative in metal, see Type 84.

## 78

## Eye Fitting

Used in conjunction with Type 83 component for gate hinges.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | 0 |  |  |
| $78-5$ | 5 | 1.18 | 1.02 | 0.46 | 0.46 |
| $78-6$ | 6 | 1.30 | 1.02 | 0.55 | 0.55 |
| $78-7$ | 7 | 1.50 | 1.02 | 0.57 | 0.57 |
| $78-8$ | 8 | 1.61 | 1.02 | 0.62 | 0.62 |

## 79

## Sheeting Clip

This component is used to attach profiled sheeting material to pipe. The component is supplied with the following hardware: one M6 x $2^{\prime \prime}$ roofing bolt, on M6 square nut, and one M6 lock washer. BZP finish.

## 81

## Single Sided Clip

For attaching wire mesh infill. For economy, it is possible to use Type 81 clips without the safety attachment to secure various types of infill panels (plyboard, perspex, etc.) up to a thickness of $25 / 64$ ". All clips are supplied with hexagonal head fixing bolts, M6 x 1.38" long and nut. The primary clip has a slot measuring $0.31^{\prime \prime} \times 0.59$ ".

Note: For $\mathbf{D}$ and E dimensions the figures are given for the respective minimum and max. dimensions allowed by the slotted hole.

## 84

## Malleable Plug

A metal drive-in plug which is difficult to remove when installed. For an alternative in plastic, see Type 77.

## The Slope Range (86-89)

The slope range of components consists of component Types $67,86,87,88,89$. These components are designed to facilitate in-line railings with vertical posts on slopes with angles between $0^{\circ}$ and $11^{\circ}$. They can be used to construct railings on access ramps for people with disabilities when used in conjunction with the Kee Klamp access range (see page 58).

Angle Tee ( $0^{\circ}-11^{\circ}$ )

Used to join the middle rail to an upright on a guardrail on a slope from $0^{\circ}$ to $11^{\circ}$.

| TYPE | Pipe ref. | in. | lb. |
| :---: | :---: | :---: | :---: |
| $86-7$ | 7 | $D$ |  |
| $86-8$ | 8 | 2.36 | 1.25 |

## 87

## Angle Elbow ( $0^{\circ}-11^{\circ}$ )

Used to join the top-rail to an end upright on a guardrail on a slope from $0^{\circ}$ to $11^{\circ}$.

| TYPE | Pipe ref. | in. | lb. |
| :---: | :---: | :---: | :---: |
| $87-7$ | 7 | $D$ | 2.36 |
| $87-8$ | 8 | 2.68 | 1.80 |

## 88

## Three Socket Angle Tee ( $0^{\circ}-11^{\circ}$ )

Used to join the top-rail to an intermediate upright on a guardrail on a slope from $0^{\circ}$ to $11^{\circ}$. As there are two socket set screws in the sleeve, this component can be used to join two pipes.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :--- |
| $88-7$ | 7 | $D$ | $E$ | lb. |
| $88-8$ | 8 | 2.68 | 5.67 | 2.16 |
| 88 | 2.73 |  |  |  |

## 89

## Two Socket Angle Cross ( $0^{\circ}-11^{\circ}$ )

Used to join the middle rail to an intermediate upright on a guardrail on a slope from $0^{\circ}$ to $11^{\circ}$. The upright passes through the component.

|  | Pipe ref. |  | in. | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| TYPE | $A$ | $B$ | $D$ |  |
| $89-7$ | 7 | 7 | 5.67 | 1.62 |
| $89-8$ | 8 | 8 | 6.22 | 2.05 |
| $89-87$ | 8 | 7 | 6.10 | 1.67 |

## The PGR Range (90-95)

These are known as Pedestrian Guardrail (PGR) components and are used as an alternative to Types 10, 15, 25 and 26 when the site is not straight and level. There is sufficient play within the component to negotiate a slope up to 7 degrees or a radius greater than 6 metres, when the uprights are 2 metre centers, using straight pipe. They also allow damaged rails to be removed without dismantling the adjacent structure. The 90 to 95 range of components is available in size 8 .

## 90

PGR Three Socket Tee
Type 90 is used to join the top-rail to an intermediate upright.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: |
| $90-8$ | 8 |  | D | $E$ |

## 91

PGR Two Socket Cross
Type 91 is used to join the mid-rail to an intermediate upright.

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| $91-8$ | 8 | 3 | $E$ | Ib |
|  | 3.50 | 3.97 |  |  |

## 92

## PGR Elbow

Type 92 is used to join the top-rail to an end post.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: |
| $92-8$ | 8 | $D$ | $E$ | lb. |
| 9.90 | 3.50 | 2.84 |  |  |

## 93

## PGR Tee

Type 93 is used to join the mid-rail to an end post.

## 95

## PGR Internal Spigot

Internal spigot designed to prevent sagging of bends when using the 90 to 95 range of components.

## 105

## Sheeting Clip without

 HardwareThis clip is used to attach profiled or flat sheeting. It is supplied with fixings.

| TYPE | Pipe ref. | lb. |
| :---: | :---: | :---: |
| $95-8$ | 8 | 1.01 |

|  | TYPE | Pipe ref. | in. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $A$ | $D$ | $E$ | $F$ | $G$ | $O$ | lb. |
| $105-6$ | 6 | 1.26 | 1.57 | 0.51 | 1.97 | 0.35 | 0.31 |
| $105-7$ | 7 | 1.50 | 1.57 | 0.51 | 1.97 | 0.35 | 0.35 |
| $105-8$ | 8 | 1.57 | 1.57 | 0.51 | 1.97 | 0.35 | 0.40 |
| $105-9$ | 9 | 1.89 | 1.57 | 0.51 | 1.97 | 0.35 | 0.51 |

Note: For use where fixing required is
positional only. Clip is not intended to bear substantial load.

## 114

## Swivel Tee

An internal swivel component, designed to accommodate varying angles on handrailing to staircases, ramps or bracing. Used in conjunction with Types 10, 15, 25 or 45.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $114-6$ | 6 | 0 | $E$ | $F$ |  |
| $114-7$ | 7 | 1.03 | 1.34 | 1.14 | 0.79 |
| $114-8$ | 8 | 1.14 | 1.93 | 1.42 | 1.61 |

## 115

## Horizontal Railing Flange

Type 115 is designed for palm fixing of guardrail and balustrades to walls, parapets, steps and ramps. The upright cannot drop through the socket. Packer plates, Type S115, are available to allow the component to be positioned in channels, slots and other offset areas.

## S115

## Packer Plate for

## Type 115

Type S115 allows the Type 115 component to be positioned in channels, slots and other offset areas.

## 118

## Cover Flange

This component slips over uprights to finish below ground post installations. The component is secured to the upright pipe with a single recessed set screw.

## 121

## Corner Crossover

This component is designed to provide a $90^{\circ}$ offset corner joint. This components is typically used with the Type 45 and Type 145 crossover components to built and offset railing.

## 145

## Crossover Coupling

Designed to give a $90^{\circ}$ offset crossover. With two socket set screws in the sleeve, this Kee Klamp component can be used where a join is required in the horizontal pipe.
For economy, it is possible to use a Type 45 in place of the 145 , using the 145 only where a join in the pipe occurs.

Note: To obtain the true height of the upright the allowance for the base components must be included.

$\emptyset$ indicates the diameter of the fixing hole.

| TYPE | Pipe ref. | in. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ | O | lb. |  |
| $262-8$ | 8 | 4.57 | 3.50 | 0.39 | 0.55 | 2.12 |

$\emptyset$ indicates the diameter of the fixing hole.

| TYPE | Pipe ref. | in. |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ | $G$ | 0 | lb. |  |
| $265-7$ | 7 | 3.39 | 2.99 | 4.09 | 2.60 | 0.55 | 2.98 |
| $265-8$ | 8 | 3.39 | 3.55 | 4.69 | 2.91 | 0.55 | 3.48 |

$\emptyset$ indicates the diameter of the fixing hole.

## 316

## Parapet Flange

Designed to retrofit onto roof parapets that are at an unsafe height. Upright pipe is angled 25 degrees from the vertical so that the building's visage is unaffected by the installed guardrailing. Two holes are located in the top mounting bracket for fixing directly into the parapet. The two set screws in the vertical socket give greater side-load stability to the angled upright. Engineered weep hole allows water to drain.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $A$ | $D$ | $E$ | 0 | lb. |
| $316-7$ | 7 | 5.35 | 4.25 | 0.55 | 4.21 |
| $316-8$ | 8 | 5.42 | 4.25 | 0.55 | 4.52 |

I indicates the diameter of the fixing hole.

## The Slope Range (320-427)

This slope range of components is designed specifically for use on steeper gradients and consists of component Types $320,321,325,326,427$. These components are designed to facilitate in-line railings with vertical posts where the slope is greater than $30^{\circ}$.

## 320LH

## Left hand level to Sloping Down Side Outlet Elbow ( $\mathbf{3 0}^{\circ}-45^{\circ}$ )

Left Hand Side Outlet Elbow component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 32OLH-7 | 7 | $D$ | $E$ | $F$ | . |
| 320LH 8 | 8 | 2.36 | 1.14 | 2.38 |  |

## 320RH

## Right hand level to Sloping Down Side Outlet Elbow ( $\mathbf{3 0}^{\circ}-45^{\circ}$ )

Right Hand Side Outlet Elbow component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :--- |
| A | $D$ | $E$ | $F$ | . |  |
| 320RH-7 | 7 | 3.38 | 2.36 | 1.14 | 2.38 |
| 320RH-8 | 8 | 3.66 | 2.68 | 1.26 | 2.82 |

## 321LH

## Left hand level to Sloping Down Side Outlet Tee ( $\mathbf{3 0}^{\circ}-45^{\circ}$ )

Left Hand Side Outlet Tee component designed for the mid-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

Note: handing perspective for Kee Klamp is looking DOWN the staircase.

Note: handing perspective for Kee Klamp is looking DOWN the staircase.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ |  |  |
| 321LH-7 | 7 | 3.38 | 1.06 | 1.14 | 2.11 |
| 321내-8 | 8 | 3.62 | 1.18 | 1.26 | 2.46 |

Note: handing perspective for Kee
Klamp is looking DOWN the staircase.

## 321RH

Right hand level to Sloping Down Side Outlet Tee ( $\mathbf{3 0 ^ { \circ }}-\mathbf{4 5}{ }^{\circ}$ )

Right Hand Side Outlet Tee component designed for the mid-rail on guardrail on slopes and stair-cases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to slo-ping down the stairs.

## 325

## Level to Sloping Down Tee ( $30^{\circ}-45^{\circ}$ )

Tee component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

## 325A

## Level to Sloping Up Tee

 ( $30^{\circ}-45^{\circ}$ )Tee component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping up the stairs.

## 326

## Level to Sloping Down or Up Cross ( $30^{\circ}-45^{\circ}$ )

Level to Sloping Down or Up Cross ( $30^{\circ}-45^{\circ}$ ) Cross component designed for the mid-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from either level to sloping down or level to sloping up the stairs.

## 327

## Three Socket Tee $\left(11^{\circ}-30^{\circ}\right)$

This component is used on safety railing with slopes between $11^{\circ}-30^{\circ}$ and fixes the top-rail to a vertical intermediate upright.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ |  |  |

| $327-8$ | 8 | 8.50 | 2.36 | 3.08 |

## 328

## Two Socket Cross $\left(11^{\circ}-30^{\circ}\right)$

This components is used on safety railing with slopes between $11^{\circ}-30^{\circ}$ and fixes the mid-rail to a vertical intermediate upright.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ |  |  |
| $328-7$ | 7 | 7.08 | 2.16 | 2.35 |
| $328-8$ | 8 | 8.50 | 2.36 | 2.64 |

## 329

## Single Socket Tee ( $11^{\circ}-30^{\circ}$ )

Designed as an alternative to Type 12, this adjustable component is most frequently used for bracing and struts and for terminating the mid-rail on sloping guardrails into the end up-right. It may be used at any selected angle between $11^{\circ}$ and $30^{\circ}$.

## 350

## Eaves Fitting

The Type 350 component has been designed for small structural building applications and provides for significant load rating. When used with the Type 351 ridge component a truss arrangement for additional support can be achieved. Double set screws are provided on the truss outlet to provide additional pull out resistance to hold structures firmly together.

## 351

## Ridge Fitting

Designed for small structural building applications and provides for significant load rating. When used with the Type 350 eaves component a truss arrangement for additional support can be achieved. Double set screws are provided on the downward truss outlet to provide additional pull out resistance and extra strength to the structure.

| TYPE | Pipe ref. | in. |  |  | lb |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $351-8$ | 8 | F | G | $H$ |  |

## 363

## Angle Base Flange ( $11^{\circ}-30^{\circ}$ )

Similar to a type 63, it is used to set the upright at an angle between $11^{\circ}-30^{\circ}$. This component should only be subjected to light loads which cannot be positioned at $90^{\circ}$ to the applied load. For greater loads or other pipe sizes a Type 62 flange should be used with the upright bent to the required angle.

| TYPE | Pipe ref. | mm |  |  |  |  | Kg |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $A$ | $D$ | $E$ | $F$ | $G$ | 0 |  |
| $363-7$ | 7 | 2.99 | 4.49 | 3.35 | 5.75 | 0.55 | 2.156 |
| $363-8$ | 8 | 3.50 | 4.88 | 3.74 | 6.46 | 0.55 | 2.882 |

$\emptyset$ indicates the diameter of the fixing hole.

## 427

## Three Socket Tee $\left(30^{\circ}-45^{\circ}\right)$

This component is used on a safety railing with slopes between $30^{\circ}$ and $45^{\circ}$ and fixes the top-rail to a vertical intermediate upright.

## 623

## High Capacity Base Flange

A heavy duty base component for railings in areas that are prone to overcrowding, including stadiums, grandstands, theatres, cinemas, shopping malls and urban footpaths. It has been designed for railings that need to resist loadings of up to $206 \mathrm{lb} / \mathrm{ft}$ applied at the top-rail.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: |
| $427-7$ | 7 | 7.09 | 2.17 | 2.09 |

| $623-8$ | 8 | 6.02 | 4.06 | 0.47 | 5.51 | 8.998 |
| $623-9$ | 9 | 6.50 | 4.53 | 0.51 | 5.51 | 8.184 |

## KeeKlamp

## Access Safety Components

The Kee Klamp access range of tubular components are designed specifically to meet the requirements of the Americans with Disabilities Act (ADA), as well as state and local building codes. The components provide a cost-effective solution for handrail installations on both new and refurbishment projects.

The Kee Klamp access range of components have been designed to create a smooth handrail with size 7 pipe (outside diameter 1.25"). All components can be powder coated in a choice of RAL colors to meet the visibility and 'not cold to the touch' requirements of the building regulations.

## Basic Assembly

How these components work together to give you the most durable, flexible, and compliant railing system for disability access.

## 10-840C

## Single Handrail Socket Capped

Capped $90^{\circ}$ socket tee designed for use at the termination of an upright where a handrail socket needs to be joined at the top of a post.

## 10-848

## Single Handrail Socket

A 'tee' component which has a hanrail socket. Typically used for attaching mid-rail supports to an upright. For upgrading size 7 and size 8 systems see A10-748 and A10-848.

## A10-748

Add-on Single Handrail Socket

The hinge and pin system of this socket tee enables existing structures to be easily modified without the need for dismantling. Hinges around existing size 7, or 1-1/4" N.B. pipe.

## A10-848

Add-on Single Handrail Socket

The hinge and pin system of this socket tee enables existing structures to be easily modified without the need for dismantling. Hinges around existing size 8, or 1-1/2" N.B. pipe.

## 26-840

Twin Handrail Socket
Component slips over upright to create two handrail sockets at $90^{\circ}$.

## 26-840C

## Twin Handrail Socket Capped

Capped component for use at the termination of an upright to create two handrail sockets at $90^{\circ}$ from the upright.

## 84-848

## Upright Top Cap

A metal drive-in plug which is difficult to remove when installed. The $84-848$ is a cap for the open ends of size 8 uprights and covers the top of a 10-848 tee component.

Note: This component can only be used with EN 10255 Medium Pipe.

## 508-7

## Gap Washer (Optional)

A rubber gasket for use with size 7 components. Comes only in black.

## 514-7

## Internal Coupling

Designed especially for DDA railing, this internal coupling can be powder coated (unlike the Type 18 component). The inset hex screw and precise coupling design allows handrail to be smooth and continuous. The internal coupling is a necessary component when installing Type 520-7, Type 554-7, Type 565-7 and Type 567-7.

## 515-7

## Split Elbow ( $\mathbf{9 0}^{\circ}$ )

This elbow consists of two separate pieces that are joined by a central screw. The component is positioned with the ends inside the adjoining handrails, and the outer grubscrews tightened. This forces the halves apart, gripping the inside of the pipe. The central screw is then tightened, locking the component in place.

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ |  |  |
| $514-7$ | 7 | 2.93 | 1.00 | 0.84 |

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ |  |  |
| $515-7$ | 7 | 1.34 | 1.97 | 1.85 |

## 518-7

## Handrail Bracket

An intermediate upright handrail support. This bracket is designed to be mounted into a socket component. The rail sits on the saddle and is secured by either $\varnothing 0.19$ " x 0.59"long Aluminum multi-grip pop rivets or No. $10 \times 0.75^{\prime \prime}$

## 520-7

## Solid Elbow ( $\mathbf{9 0}^{\circ}$ )

An alternative elbow to Type 515, two piece component. The elbow is designed to be joined to the handrails using two Type 514-7 internal couplings.

## 554-7

## Variable Angle

A variable angle elbow for changes in elevation. This elbow allow for flexibility and a range of angles. The elbow is joined to rails using two Type 514-7 internal couplings.

|  | Pipe ref. |  | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $518-7$ | 7 | socket | 2.01 | 1.18 | 0.20 | 1.08 |

$\emptyset$ indicates the diameter of the fixing hole.

## 555-8

## Top Fix Rail Bracket

An in-line, adjustable angle component for use where a handrail is mounted to the top of the upright. The saddle has a variable angle of $60^{\circ}$ from the vertical.

|  | Pipe ref. |  |  |  | in. |  |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $555-8$ | 8 | 7 | 0.51 | 3.50 | 1.89 | 0.20 | 1.10 |  |  |

$\emptyset$ indicates the diameter of the fixing hole.

## 561-7

## Wall Frange

A wall mounted handrail end flange. Four fixing holes are drilled and countersunk to suit $1 / 4^{\prime \prime}$ diameter flat head wood screws. The handrail is joined to the flange with Type 514-7 Internal Coupling.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | $A$ | $D$ | $E$ | 0 |  |
| $561-7$ | 7 | 3.54 | 1.57 | 0.27 | 0.77 |
| $\emptyset$ indicates the diameter of the fixing hole. |  |  |  |  |  |

## 565-7

## Wall Mounted End Return

A wall mounted handrail return bracket. The bracket is joined to handrail using Type 514-7 coupling. Three fixing holes are drilled and countersunk to suit No. 14 countersunk screws.

## 567-7

## End Post Handrail Return

A handrail return bracket for use when mounting railing to an upright. This handrail is mounted to an upright using a handrail socket. Join the return handrail using Type 514-7 internal coupling.

## 570-7

## Wall Mounted Handrail Bracket

A wall mounted version of the 518-7. The handrail pipe sits on the 'saddle' and is secured using either No. 10 self-drilling screws or multi-grip pop rivets. This bracket provides holes for countersunk head fixing screws only. Three fixing holes are drilled and countersunk to suit $1 / 4^{\prime \prime}$ diameter countersunk screws.

## 575-7

## Upright Mounted Handrail Joiner

This bracket is designed to be mounted on a type 10-848, 26-840 or an A10-848 connecting two adjoining pipes without requiring pop rivets or self tapping screws. The inset setscrew and precise coupling design facilitates a smooth and continuous finished handrail.

## 580-7

## Wall Mounted Handrail Joiner

A wall mounted version of the 575-7, comprises of three countersunk woodscrew fixing holes and connects two adjoining handrail pipes without requiring pop rivets or self tapping screws. The inset setscrew and precise coupling design facilitates a smooth and continuous finished handrail.

| TYPE | Pipe ref. | in. |  |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ | 0 |  |  |
|  | 7 | 3.32 | 3.39 | 3.54 | 0.27 | 1.48 |

$\emptyset$ indicates the diameter of the fixing hole.

| TYPE | Pipe ref. |  | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| $567-7$ | 7 | stub | 2.01 | 3.39 | 3.19 | 1.08 |

## Kee Lite

## Aluminum Safety Components

Kee Lite components are made from a high grade Aluminum Silicon Magnesium Alloy. They are strong yet light, and extremely durable - even in harsh environments. They are only one-third the weight of iron components, with about 75\% of comparable tensile strength. Kee Lite components are designed to suit ASTM B221 pipe.

Kee Lite components offer flexibility and can be used in a variety of applications, from contemporary to industrial: your imagination is the only limitation.

Because Kee Lite can be easily installed with a hex tool and pipe cutters, there is no need for welding or specialist installation skills, saving you both time and money.

Kee Lite is securely locked into place using recessed set screws that provide a sleek and smooth look to your railing system.
Kee Lite components are available for pipe sizes 25, 32, 40 and 50 N.B.

## L10

## Single Socket Tee

This component creates a $90^{\circ}$ perpendicular joint between two pipes.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L10-6 | 6 | 2.05 | $E$ | 1.67 | 2.20 |
| L10-7 | 7 | 2.56 | 2.09 | 2.52 | 0.29 |
| L10-8 | 8 | 2.91 | 2.36 | 2.76 | 0.66 |
| L10-9 | 9 | 3.54 | 2.91 | 3.23 | 1.06 |

## L14

## Straight Coupling

Designed to give an in-line joint between pipes of the same size. Frequently used to enable full pipe lengths to be used in railing applications.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L14-6 | 6 | 1.97 | $E .94$ | $F$ | 1.67 |
| L14-7 | 7 | 2.32 | 5.12 | 2.09 | 0.40 |
| L14-8 | 8 | 2.56 | 5.83 | 2.36 | 0.82 |

Note: It is not advisable to join the upper and lower rails of a railing within the same bay.

## L15

## Elbow (90 ${ }^{\circ}$ )

A $90^{\circ}$ elbow joint, most frequently used as an end joint for the top-rail of safety railing on a level site.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L15-6 | 6 | 2.05 | 1.67 | 2.20 | 0.31 |
| L15-7 | 7 | 2.56 | 2.09 | 2.32 | 0.62 |
| L15-8 | 8 | 2.91 | 2.36 | 2.56 | 0.88 |
| L15-9 | 9 | 3.54 | 2.91 | 3.07 | 1.46 |

## L19

Adjustable Side Outlet Tee ( $60^{\circ}-200^{\circ}$ )
Used to form variable angle joints between $60^{\circ}$ and $200^{\circ}$. Not designed to absorb bending loads at barrier intersection.

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| L19-6 | 6 | $D$ | $E$ |  |
| L19-7 | 7 | 2.67 | 2.95 | 0.79 |
| L19-8 | 8 | 2.36 | 3.54 | 1.28 |

Note: Type L19 components are bagged in pairs and are weighed, priced, and sold as such. Weight below refers to pairs.

## L20

## Side Outlet Elbow ( $\mathbf{9 0}^{\circ}$ )

A $90^{\circ}$ corner joint most frequently used for the top-rail of safety railing. It can also be used for the corner joint of benches, work tables and other rectangular structures.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L20-6 | 6 | 2 | $E$ | $F$ |  |
| L20-7 | 7 | 2.56 | 1.67 | 1.97 | 0.42 |
| L20-8 | 8 | 2.91 | 2.36 | 2.32 | 0.77 |

## L21

## Side Outlet Tee ( $\mathbf{9 0}^{\circ}$ )

Most frequently paired with type L20 to give a $90^{\circ}$ corner joint for the middle rail of safety railing and other rectangular structures. The upright passes through the component.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L21-6 | 6 | $D$ | $E$ | $F$ |  |
| L21-7 | 7 | 2.56 | 1.67 | 2.20 | 0.35 |
| L21-8 | 8 | 2.91 | 2.36 | 2.52 | 0.66 |

## L25

## Three Socket Tee

Commonly used as the $90^{\circ}$ joint between the top-rail and an intermediate upright on safety railing. As there are two socket set screws in the sleeve, this component can be used where a join is required in the horizontal pipe. The Type L10 component can be used as an alternative when a join in the pipe is not required.

## L26

## Two Socket Cross

Usually paired with Type L25 to give a $90^{\circ}$ joint between the middle rail and an intermediate upright on safety railing. The upright passes through the component.

| TYPE | Pipe ref. | in. |  |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| L25-6 | 6 | $D$ | $E$ | $F$ | $G$ |  |
| L25-7 | 7 | 2.56 | 1.67 | 1.97 | 4.09 | 0.46 |
| L25-8 | 8 | 2.91 | 2.36 | 2.52 | 5.12 | 0.83 |
| L25-9 | 9 | 3.54 | 2.91 | 3.07 | 7.09 | 1.12 |

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L26-6 | 6 | 1.67 | 2.20 | 4.09 | 0.37 |
| L26-7 | 7 | 2.09 | 2.52 | 5.12 | 0.62 |
| L26-8 | 8 | 2.36 | 2.76 | 5.83 | 0.99 |
| L26-9 | 9 | 2.91 | 3.23 | 7.09 | 1.46 |

## L29

## Single Socket Tee ( $30^{\circ}-60^{\circ}$ )

This adjustable component is most frequently used for struts and braces. It can be used at any selected angle between $30^{\circ}$ and $60^{\circ}$. Suitable for connecting an angled staircase rail to a vertical upright.

## L30

## Adjustable Cross ( $30^{\circ}-45^{\circ}$ )

This adjustable component can be used for railing on staircases between the mid-rail and intermediate upright which is required to remain vertical. It can be used at any selected angle between $30^{\circ}$ and $45^{\circ}$.

| TYPE | Pipe ref. | in. |  |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| L29-7 | 7 | 3.23 | 3.74 | 1.06 | 2.07 | 0.70 |
| L29-8 | 8 | 3.66 | 4.25 | 1.18 | 2.32 | 0.90 |

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L30-7 | 7 | $D$ | $E$ | $F$ |  |
| L30-8 | 8 | 9.65 | 2.07 | 2.13 | 1.15 |

## L35

## Three Socket Cross

Most frequently used to tie uprights with horizontal pipe in three directions, all $90^{\circ}$ to the upright. The upright passes through the component.

| TYPE | Pipe ref. | in. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | $D$ | $E$ | $F$ | $G$ | Ib. |  |
| L35-6 | 6 | 2.20 | 4.09 | 2.05 | 1.67 | 0.68 |
| L35-7 | 7 | 2.52 | 5.12 | 2.56 | 2.09 | 0.90 |
| L35-8 | 8 | 2.75 | 5.82 | 2.91 | 2.36 | 1.19 |

## L40

## Four Socket Cross

Most frequently used in multiple upright structures to tie a centre upright with horizontal pipes in four directions. The upright passes through the component.

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| L40-7 | 7 | 5 | $E$ |  |
| L40-8 | 8 | 5.82 | 1.97 | 1.14 |

## L45

## Crossover

Designed to give a $90^{\circ}$ offset crossover joint. Frequently used on safety railing utilising a continuous horizontal rail, minimising pipe cuts to reduce costs. Type L45 may also be used to allow intermediate levels on racks.

| TYPE | Pipe ref. | in. |  | lb. |
| :---: | :---: | :---: | :---: | :---: |
| L45-6 | 6 | 1.73 | 1.57 | 0.26 |
| L45-7 | 7 | 2.13 | 1.97 | 0.68 |
| L45-8 | 8 | 2.40 | 2.20 | 0.77 |

## L46

## Combination Socket Tee and Crossover

Used on racking to join horizontal carrying rails to the upright, leaving the socket to take a horizontal pipe outside the upright. On pallet racking, it is preferable to have the carrying rails inside the upright.

## LC50

## Single Swivel Socket

A complete combination swivel component, variable through $170^{\circ}$

| TYPE | Pipe ref. | lb. |  |
| :---: | :---: | :---: | :---: |
| LC50-66 | 6 | 6 | 0.68 |
| LC50-77 | 7 | 7 | 0.90 |
| LC50-88 | 8 | 8 | 1.10 |

WARNING: Swivel components are not designed to resist bending loads. A structure should not be designed entirely of swivel components as they will not provide sufficient stability for the structure.

## LF50

## Female Single Swivel Socket Member

The female part of a swivel component combination.

## LM50

## Male Single Swivel Socket Tee

The male portion of a swivel component combination. The component can also be used to attach flat panels to tubular structures.

## LC51

Double Swivel Socket
Complete combination component. Reducing combinations of Type LC51 are available in sizes 6,7 and 8.

| TYPE | Pipe ref. | in. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| $A$ | $D$ | $E$ | $F$ | $G$ | Ib. |  |

| LF50-8 | 8 | 2.56 | 2.36 | 3.54 | 0.38 | 0.64 |

| TYPE | Pipe ref. | in. |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| LM50-6 | 6 | 1.97 | 1.73 | 1.85 | 0.43 | 0.38 | 0.26 |
| LM50-7 | 7 | 2.32 | 2.00 | 1.97 | 0.43 | 0.38 | 1.33 |
| LM50-8 | 8 | 2.56 | 2.36 | 2.17 | 0.43 | 0.38 | 1.44 |

$\emptyset$ indicates the diameter of the fixing hole.

| TYPE | Pipe ref. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| LC51-666 | 6 | 6 | 6 | 1.26 |
| LC51-777 | 7 | 7 | 7 | 1.61 |
| LC51-888 | 8 | 8 | 8 | 1.88 |

| TYPE | Pipe ref. <br> A |  |  |  | G | H | 0 | [b. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| LM51-6 | 6 | 1.97 | 1.73 | 1.85 | 0.43 | 1.67 | 0.38 | 0.35 |
| LM51-7 | 7 | 2.32 | 2.00 | 1.97 | 0.43 | 2.09 | 0.38 | 0.51 |
| LM51-8 | 8 | 2.56 | 2.36 | 2.17 | 0.43 | 2.36 | 0.38 | 0.60 |

## LC52

## Corner Swivel Socket

Complete combination component. Reducing combinations of type LC52 are available in sizes 6, 7 and 8. See Type LM52 and Type LF50 for measurements.

| TYPE | Pipe ref. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| LC52-666 | A | $B$ | $C$ | 1.06 |
| LC52-777 | 7 | 6 | 6 | 7 |
| LC52-888 | 8 | 8 | 8 | 1.48 |

## LM52

## Male Corner Swivel Socket Member

One half of a combination component. This component can also be used for attaching flat panels to tubular structures.

|  | TYPE | Pipe ref. | in. |  |  |  |  |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- | :---: | :---: |
| LM52-6 | 6 | 1.97 | 1.73 | 1.85 | 0.43 | 1.67 | 0.38 | 0.35 |  |  |
| LM52-7 | 7 | 2.32 | 2.00 | 1.97 | 0.43 | 2.09 | 0.38 | 0.51 |  |  |
| LM52-8 | 8 | 2.56 | 2.36 | 2.17 | 0.43 | 2.36 | 0.38 | 0.60 |  |  |

$\emptyset$ indicates the diameter of the fixing hole.

## LB54

## Adjustable Elbow

 (45 ${ }^{\circ}-200^{\circ}$ )A swivel component designed as an in-line variable angle connection, adjustable from $45^{\circ}$ to $200^{\circ}$.

| TYPE | Pipe ref. | in. |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | D | E | F |  |
| LB54-66 | 6 | 1.97 | 1.67 | 3.94 | 0.77 |
| LB54-77 | 7 | 2.28 | 2.17 | 4.69 | 1.43 |
| LB54-88 | 8 | 2.56 | 2.36 | 5.16 | 1.61 |

## L55

## Obtuse Angle Elbow

The Type L55 is an ideal component to use as an alternative to bending, or when a junction between a sloping pipe and an end post (i.e. guardrail and staircases).

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| L55-6 | 6 | 1.97 | 4.49 | 0.37 |
| L55-7 | 7 | 2.28 | 5.98 | 0.73 |
| L55-8 | 8 | 2.52 | 5.90 | 0.79 |

## L55A

## Variable Elbow

## ( $11^{\circ}-30^{\circ}$ )

The Type L55A is an ideal component to use as an alternative to bending or when a junction between a sloping pipe and an end post.

| TYPE | Pipe ref. | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| L55A-7 | 7 | $D$ | $E$ |  |
| L55A-8 | 8 | 2.52 | 6.49 | 0.64 |

## L56

## Acute Angle Elbow

( $30^{\circ}-45^{\circ}$ )
Type L56 is an ideal component to use as an alternative to bending, or when a junction between a sloping pipe $\left(30^{\circ}-45^{\circ}\right)$ and an end post (i.e. guardrail and staircases).

| TYPE | Pipe ref. | in. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| L56.7 | 7 | $D$ | $E$ | $F$ | Ib. |
| L56-8 | 8 | 5.72 | 3.90 | 4.72 | 1.03 |

## L56A

## Acute Angle Elbow ( $11^{\circ}-30^{\circ}$ )

Type L56A is an ideal component to use as an alternative to bending, or when a junction between a sloping pipe $\left(11^{\circ}-30^{\circ}\right)$ and an end post (i.e. guardrail on staircases) between.

## LC58

## Swivel Flange

A swivel component for attachment of angled pipe to a flat surface. See Type LM58 and Type LF50 for measurements.

## LM58

## Double Swivel Socket

The male part of a swivel component for attaching angled piping to flat surfaces.

## L61

## Flange

This flange, with holes provided for countersunk head fixing screws only, is used in structures where the fixing required is positional only. Frequently used as a wall fixing bracket.

|  | Pipe ref. | in. |  |  |  |  |  | lb. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |

| L61-7 | 7 | 2.0 | 2.17 | 0.31 | 4.33 | 2.40 | 0.25 | 0.64 |
| L61-8 | 8 | 2.36 | 2.36 | 0.31 | 4.72 | 2.64 | 0.25 | 0.71 |

$\emptyset$ indicates the diameter of the fixing hole.
WARNING: It is not recommended for use as a base flange to support guardrail or as a base flange to support
balustrades (see Type 62).

Note: The pipe is able to pass through the base of the component.

| TYPE | Pipe ref. | in. |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |

| LC58-6 | 6 | 0 |  |
| LC58-7 | 7 | 0.45 | 0.74 |
| LC58-8 | 8 | 0.45 | 1.93 |

$\emptyset$ indicates the diameter of the fixing hole
WARNING: This component is not recommended for use as a base flange to support guardrail or balustrades.

## L63

## Angle Base Flange ( $45^{\circ}-60^{\circ}$ )

Similar to a Type L62, but used to set up the upright at an angle between $45^{\circ}$ to $60^{\circ}$. This component should only be subjected to light loads which cannot be positioned at $90^{\circ}$ to the applied loads. For greater loads or other pipe sizes, a Type L62 flange is used and the upright bent to the required angle.

## L67

## Angle Flange

Type L67 has been designed to allow the upright to pivot in the barrel, providing an angular displacement from $87^{\circ}$ up to a maximum of $79^{\circ}$, measured from the vertical. Ideal to secure balustrade and guardrail systems on access ramps or other types of slopes.

## L68

## Wall Flange

Side palm flange for fixing guardrail and balustrades to walls, parapets, steps and ramps. The upright cannot drop through the socket. Note: If the upright is required to pass through the component by machining out the base stop, the bottom fixing hole becomes unusable.

## L69

## Railing Flange with Toeboard Adaptor

The railing flange has been designed for guardrail and balustrades and allows attachment of a toeboard to the base. The base plate can use a mechanical or chemical anchor; the side plates have slotted holes to allow for a degree of sideways movement for ease of installation.*

A toeboard designed for use with
Type L69 railing flange is available
from Kee Safety. (See page 55. .)

## L70

## Rail Support

This component, with holes provided for countersunk head screw fixings only, is designed to carry handrails along walls or to fix structures back to walls. The pipe passes through the component and cannot be joined within the component. Type 70 is also used to attach toeboards to the base of guardrail uprights.

$\varnothing$ indicates the diameter of the fixing hole.

## L84

## Metal Plug

A metal drive-in plug. For proper insertion, a rubber mallet should be used. The metal plug is difficult to remove once installed.

| TYPE | Pipe ref. | in. |  |  | Ib. |
| :---: | :---: | :---: | :---: | :---: | :---: |

| L114-6 | 6 | 1.97 | 2.20 | 1.77 | 1.26 | 0.40 |
| L114-7 | 7 | 2.09 | 2.52 | 1.69 | 1.57 | 0.64 |
| L114-8 | 8 | 2.36 | 2.76 | 1.81 | 1.57 | 0.78 |

$\emptyset$ indicates the diameter of the fixing hole.
WARNING: This component is not recom-
mended for use as a base flange to support guardrail or balustrades.

## L148

## Heavy Duty Rectangular Flange

This a structural base fixing is used to fix down guardrail and balustrades. Available with either two or four fixing holes. The two socket set screws give greater stability to the upright. It is recommended that fixing holes be in-line with the applied load.

## L150

## Heavy Duty Four Hole Square Flange

A heavy duty, four point fixing flange. Ideal when a structural fixing is required.

Note: The L148-92 has two holes; the L148-94 has four holes.
 $\emptyset$ indicates the diameter of the fixing hole.

## L152

Four Hole Square Flange

A four point fixing flange.

| TYPE | Pipe ref. | in |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

$\emptyset$ indicates the diameter of the fixing hole.

## L160

## Smooth Handrail Fitting

Designed to provide attachment for a smooth handrail. The component swivels during installation, allowing the handrail to be placed at any angle. The component is supplied as a kit including fasteners.

| TYPE | Pipe ref. | in. |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |
|  | $A$ | $D$ | $E$ | $F$ | $G$ | $H$ |  |

| L160-8 | 8 | 2.32 | 1.57 | 0.31 | 1.57 | 2.64 | 0.22 |

## L164

## Offset Wall Flange

This component is designed for palm fixing of uprights to steel channels, walls, parapets, steps and ramps. The upright cannot drop through the socket.

$\emptyset$ indicates the diameter of the fixing hole.

## L262

## Round Base Flange

Sleek round base flange. A single fixing hole is hidden to create a more aesthetic look. The two set screws in the vertical socket give greater upright stability.

## L320LH

Left hand level to Sloping Down Side Outlet Elbow ( $\mathbf{3 0}^{\circ}-\mathbf{4 5}{ }^{\circ}$ )
Left Hand Side Outlet Elbow component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

## L320RH

Right hand level to Sloping Down Side Outlet Elbow ( $\mathbf{3 0}^{\circ}-\mathbf{4 5}{ }^{\circ}$ )

Right Hand Side Outlet Elbow component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

Note: handing perspective for Kee Lite is looking UP the staircase.

## Kee Lite

## L321LH

## Left hand level to Sloping Down Side Outlet Tee ( $30^{\circ}-45^{\circ}$ )

Left Hand Side Outlet Tee component designed for the mid-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

## L321RH

Right hand level to Sloping Down Side Outlet Tee ( $30^{\circ}-45^{\circ}$ )

Right Hand Side Outlet Tee component designed for the mid-rail on guardrail on slopes and stair-cases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

## L325

## Level to Sloping Down Tee ( $30^{\circ}-45^{\circ}$ )

Tee component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping down the stairs.

## L325A

## Level to Sloping Up Tee ( $30^{\circ}-45^{\circ}$ )

Tee component designed for the top-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from level to sloping up the stairs.

## L326

Level to Sloping Down or Up Cross ( $\mathbf{3 0}^{\circ}-45^{\circ}$ )

Level to Sloping Down or Up Cross ( $30^{\circ}-45^{\circ}$ ) Cross component designed for the mid-rail on guardrail on slopes and staircases between $30^{\circ}$ and $45^{\circ}$ at the junction where the handrail changes from either level to sloping down or level to sloping up the stairs.

Note: handing perspective for Kee Lite is looking UP the staircase.

## L427

## Three Socket Tee

## ( $30^{\circ}-45^{\circ}$ )

This component is used on a safety railing with slopes between $30^{\circ}$ and $45^{\circ}$ and fixes the top-rail to a vertical intermediate upright.

| TYPE | Pipe ref: | in. |  | Ib. |
| :---: | :---: | :---: | :---: | :---: |
| L427-7 | 7 | 7.08 | 2.05 | 0.99 |
| L427-8 | 8 | 8.50 | 2.32 | 1.41 |

## Gaskets

## Neoprene Gaskets

Gaskets are available to prevent the corrosion associated with lime in concrete. The gaskets have more resistance than natural rubber to sunlight, ozone and oxidation. Neoprene is heat resistant and does not soften as natural rubber does under severe exposure. Gasket part numbers correspond to Kee Lite flange and base components as per table.

## 97

## Set Screws

Socket set screws are supplied and inserted in all Kee Safety components as standard, the case hardened set screws that are fitted to Kee Klamp components are coated with Kee Koat. Kee Koat ensures at least four times the corrosion resistance of bright zinc plated alternatives. Kee Lite components are all supplied and fitted with grade 1.4301 stainless steel set screws.

## 97ATD

## Anti-theft Device

Aluminum drive rivets discourages the tampering of set screws whilst creating a nice finished appearance. Drive rivets are easy to install. The rivet pin is hit with a hammer driving it flush with the rivet head and expanding the rear of the rivet. No special tools are necessary. One size fits components 5-9.

| TYPE | $\begin{gathered} \text { To suit } \\ \text { pipe sizes } \end{gathered}$ | Size | Finish |
| :---: | :---: | :---: | :---: |
| 97-4 | 4 | 1/8" BSF | BZP |

| 97-7S | 788 | ISO 228 3/8" | Grade 1.4301 Stainless Steel |

## 98

## Ratchet Set

Reversible ratchet for easier fastening of grub screws (1/2" Drive, 10" long). Ratchet handle and hexagon bits are supplied separately. A/F refers to the dimensions across the flats.

## 99

## Hex Key

Simple hex key. A/F refers to the dimension across the flats.

Note: Actual product may differ from that shown. Image is for illustration purposes only.

| TYPE | To suit pipe sizes | A/F |  |
| :---: | :---: | :---: | :---: |
| $99-4$ | 4 |  |  |
| $99-6$ | 5 | 6 |  |
| $99-789$ | 7 | 8 | 9 |

## 100

## Plastic Set Screw Cap

Grey plastic set screw caps provide the perfect finishing touch to
Galvanized Kee Klamp components. Secure push-in-fit application.

## I-FP

## In-fill Panels

Panels in a variety of materials, sizes and finishes. The standard 2" x 2" weld mesh is available in either Galvanized or powder coated finish. Maximum panel size is $94.5^{\prime \prime} \times 47$ ". Smaller opening are also available (1" x 1" or 2" x 2").

## 055200 Metal Railings

## PART 1-1 GENERAL

1.1 SCOPE
1.2 RELATED WORK
1.3 RAILING STRUCTURAL REQUIREMENTS
1.4 SUBMITTALS
1.5 QUALITY ASSURANCE

## PART 2-2 PRODUCTS

2.1 SUPPLIER
A. Manufacturer of handrail, guardrail or railing systems shall be the following except where otherwise noted on the Drawings:

Kee Safety, Inc.
100 Stradtman Street
Buffalo, NY 14206
Tel: (716) 896-4949

### 2.2 SYSTEMS

A. Handrails and Guardrails: Provide pipe, Kee Klamp, Kee Lite or Kee Access fittings and accessories as indicated or required to match the design indicated in the Drawings.

### 2.3 METALS

A. Pipe

1. Steel Pipe: ASTM A53.
2. Aluminum Pipe: ASTM B221.

## B. Fittings and Castings

1. Cast Iron Fittings or Castings to comply with ASTM A47.
2. Hot Dip Galvanized finish to comply with BS EN 1562 \& BS EN 1563.
3. Aluminum Alloy Fittings or Castings conforming to ASTM A 356-T6
4. Brackets, Flanges and Anchors: Cast or formed metal of same material and finish as supported rails.

### 2.4 OTHER MATERIALS

2.5 FABRICATION-GENERAL

PART 3-3 EXECUTION
3.1 EXAMINATION AND PREPARATION
3.2 INSTALLATION
3.3 JOB CLOSE OUT

A brief three part specification for Kee Safety components is shown above for quick reference. The full specification is available for download on the Kee Safety website.

## Straight and Level Guard Rail

Using Types 10, 15, 20, 21, 25 and 26 or L10, L15, L20, L21, L25 and L26

Where:
$\mathbf{L}=$ distance between centers
of uprights

I = length of horizontal pipe
$\mathbf{H}=$ distance from ground to
centre line of top-rail
h = length of upright pipe

## Table 1

Dimension ‘x' for fittings above, including Types 35, 40 and L35*

| Fitting Size | $x$ (in.) |
| :---: | :---: |
| 3 | -0.5 |
| 4 | -0.5 |
| 5 | -0.5 |
| 6 | -0.625 |
| 7 | -0.875 |
| 8 | -1 |
| 9 | -1.125 |

Table 1 gives details of dimension ' $x$ ' in the formula: $I=L-2 x$
To calculate rail lengths and uprights use the formula: $\mathrm{h}=\mathrm{H}-\mathrm{x} \pm$ (ground fixing)*

Note: When reducing fittings are being used care must be taken to use the correct ' $x$ ' dimension. (i.e., Type 10-87, vertical pipe size 8 , horizontal pipe size 7 . To find the correct length of the horizontal pipe, the length ' $x$ ' is that for the size 8 vertical pipe.) When using Types 35 and 40 the above ' $x$ ' dimension should be used. Although guardrailing is normally constructed in size 6, 7 and 8 pipe, Table 1 shows the cutting length for all Kee Klamp pipe sizes, and can therefore be applied to many other rectangular structures.
*When using Kee Lite bases, L61, L62, L69, L140, L150 and L152, "ground fixing" dimension will be zero.

## Guardrailing up Slopes $0^{\circ}-11^{\circ}$

Using Types $86,87,88$ and 89

Where the upright remains vertical, i.e. ramps
and stairways, (i) dimension ' $x$ ' to be subtracted
from the upright centre dimension measured
on the slope to give rail length. $(1=L-2 x)$;
(ii) dimension ' $y$ ' to be added to the centre
dimension to give the length of the upright
( $\mathrm{H}=\mathrm{h}+\mathrm{y}+$ ground fixing).

Table 2
Rails

| Angle of Slope | Size 8 Fittings ' $\mathrm{X}^{\prime}$ (in.) |
| :---: | :---: |
| $0^{\circ}$ to $4^{\circ}$ | -1 |
| $5^{\circ}$ to $9^{\circ}$ | -1.125 |
| $10^{\circ}$ to $11^{\circ}$ | -1.25 |

Table 2 gives details of dimensions required for calculating the rail lengths, where angles are between $0^{\circ}$ and $11^{\circ}$.

Table 3
Uprights

| Angle of Slope | Size 8 Fittings ' $y^{\prime}$ (in.) |
| :---: | :---: |
| $0^{\circ}$ to $4^{\circ}$ | -1 |
| $5^{\circ}$ to $9^{\circ}$ | -1.125 |
| $10^{\circ}$ to $11^{\circ}$ | -1.25 |

Table 3 gives details of dimensions required for calculating the upright lengths, where angles are between $0^{\circ}$ and $11^{\circ}$.

## Guardrail Up Slopes $11^{\circ}$ to $\mathbf{3 0}^{\circ}$

Using Types 55A, 56A, 327, 328 and 329 size 7 and 8

Where the upright remains vertical, i.e. stairways
(i) dimension $\mathrm{x}, \mathrm{x} 1, \mathrm{x} 2, \mathrm{x} 3$ to be subtracted from the upright centers; dimension (L) to give the rail length;
(ii) dimension $\mathrm{y}, \mathrm{y} 1$ and y 2 for determining the
upright length.

## Guardrail up Slopes $30^{\circ}$ to $45^{\circ}$

Using Types 29, 30, 55, 56 and

Where the upright remains vertical, i.e. stairways
(i) dimension $x, x 1, x 3, y \& z$ to be subtracted from the upright centers; dimension (L) to give the rail length; (ii) dimension $u, v$ and $w$ for determining the upright length.

## Table 3

Rails

| Angle <br> Of Slope | $7 \quad$ Fitting |  |  |  |  |  | 8 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |
|  | X1 | $\times 2$ | x3 | X4 | y | Z | X1 | $\times 2$ | $\times 3$ | X4 | $y$ | Z |
| $30^{\circ}$ | -1.54 | -0.79 | -2.17 | -1.46 | -1.93 | -2.17 | -1.77 | -0.87 | -1.93 | -1.69 | -2.36 | -2.91 |
| $35^{\circ}$ | -1.73 | -0.63 | -2.4 | -1.57 | -1.97 | $-2.13$ | -1.97 | $-0.71$ | -2.17 | -1.85 | -2.36 | -2.91 |
| $40^{\circ}$ | -1.85 | -0.79 | -2.8 | -1.77 | -2.01 | -2.09 | -2.17 | -0.83 | -2.6 | -2.05 | -2.4 | -2.91 |
| $45^{\circ}$ | -1.97 | -1.02 | -3.35 | -2.01 | -3.58 | -2.09 | -2.17 | -1.02 | -3.19 | -2.32 | -2.68 | -2.6 |

Table 3 gives details of dimensions required for calculating the rail lengths, where angle are between $30^{\circ} \& 45^{\circ}$

## Table 4

Uprights

| Angle Of Slope | Fitting Size |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 7 |  |  | 8 |  |  |
|  | u | v | W | U | v | W |
| $30^{\circ}$ | -0.67 | +0.2 | -1.89 | -0.98 | $+0.24$ | -1.93 |
| $35^{\circ}$ | -0.63 | +0.2 | -2.32 | -0.83 | $+0.24$ | -2.32 |
| $40^{\circ}$ | -0.31 | +0.12 | -2.72 | -0.55 | +0.24 | -2.72 |
| $45^{\circ}$ | +0.08 | -0.04 | -3.15 | -0.08 | -0.16 | -3.19 |

Table 4 gives details of dimensions required for calculating the upright lengths.

## Guardrail up slopes $30^{\circ}$ to $45^{\circ}$

Using 325, 325A, 326, size 7 and 8

Table 5
Rails

| Angle <br> Of Slope | 7 | 8 |
| :---: | :---: | :---: |
|  | x | x |
| $35^{\circ}$ | -1.85 | -2.24 |
| $40^{\circ}$ | -2.05 | -2.44 |
| $45^{\circ}$ | -2.32 | -2.72 |

Table 5 gives details of dimensions required for calculating the rail lengths, where angle are be-tween $30^{\circ} \& 45^{\circ}$.

## Slope Fittings

The latest addition to the Kee Klamp portfolio is an extension to the current range of slope fittings designed to enhance the building of guardrail along staircases and ramps particularly when the slope is greater than $30^{\circ}$. The range introduces single fittings to cater for situations where currently a combination of fittings is required. Not only does this improve the aesthetics of the finished guardrail but it also allows for a quicker and easier install. The range of slope fittings is available in Size 7 (outer diameter $11 / 4^{\prime \prime}$ ) and Size 8 (outer diameter $1 \frac{1}{1 / 2}$ ") designed for use with steel piping to ASTM A53.

Kee Klamp fittings are iron castings manufactured to the requirements of BS EN 1562 \& BS EN 1563. They are supplied hot dip Galvanized to ASTM A123.

A Kee Klamp fitting can support an axial load of 2000 lbs. per set screw tightened to a torque of 29ft.Ibs. In common with all Kee Klamp products, the threaded recesses of each fitting are covered with Threskoat protective coating to provide enhanced corrosion resistance and all grub screws are manufactured in case hardened steel coated with Kee Coat for corrosion protection.

## Guardrail up slopes $30^{\circ}$ to $\mathbf{4 5}^{\circ}$

Using 320RH, 320LH, 321RH and 321LH size 7 and 8

Table 6
Rails

|  | Fitting Size |  |
| :---: | :---: | :---: |
| Angle |  |  |
| Of Slope |  |  |\(\left.| \begin{array}{c}7 <br>

x\end{array}\right]\)

Table 6 gives details of dimensions required for calculating the rail lengths, where angle are between $30^{\circ} \& 45^{\circ}$.

## Features and Benefits

- Kee Klamp is the best known brand of slip-on pipe fittings available for over 80 years
- Manufactured to stringent quality standards to ensure consistent performance
- Extended range of slope fittings gives greater design flexibility
- Adjustability in the fittings allows greater on-site tolerances to be met
- Using single fittings rather than pairs speed up installation times

## Assembly and Installation

Guardrailing up Slopes $\mathbf{1 1}^{\circ}-\mathbf{3 0}^{\circ}$
Using Adjustable Fittings, Types 327 and 328

Table 4
Rails

| Angle <br> of Slope | Size 7 Fittings: <br> ' $x$ ' (in.) | Size 8 Fittings: <br> ' $x$ ' (in.) |
| :---: | :---: | :---: |
| $11^{\circ}$ | -1.1 | -1.18 |
| $15^{\circ}$ | -1.26 | -1.38 |
| $20^{\circ}$ | -1.26 | -1.5 |
| $25^{\circ}$ | -1.38 | -1.61 |
| $30^{\circ}$ | -1.61 | -1.73 |

Table 4 gives details of dimensions required for calculating the rail lengths, where angles are between $11^{\circ}$ and $30^{\circ}$.

Table 5

| Angle <br> of Slope | Size 7 Fittings: <br> ' y ' (in.) | Size 8 Fittings: <br> ' y ' (in.) |
| :---: | :---: | :---: |
| $11^{\circ}$ | +0.63 | +0.75 |
| $15^{\circ}$ | +0.63 | +0.75 |
| $20^{\circ}$ | +0.51 | +0.63 |
| $25^{\circ}$ | +0.51 | +0.63 |
| $30^{\circ}$ | +0.51 | +0.51 |

Table 5 gives details of dimensions required for calculating the upright lengths, where angles are between $11^{\circ}$ and $30^{\circ}$.

## Guardrailing up Slopes $30^{\circ}-45^{\circ}$

Using Adjustable Fittings, Types 29, 30, 55 and 56 or Types L29 and L30 size 6, 7 and 8

Table 6
Rails

| Angle of Slope | Size 6 Fitting |  |  | Size 7 Fitting |  |  | Size 8 Fitting |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $x$ (in.) | $y$ (in.) | z (in.) | $x$ (in.) | $y$ (in.) | z (in.) | x (in.) | $y$ (in.) | z (in.) |
| $30^{\circ}$ | -1.25 | -2.125 | -1.375 | -1.625 | -2.5 | -1.625 | -1.75 | -3 | $-2.125$ |
| $35^{\circ}$ | -1.375 | -2 | -1.5 | -1.75 | -2.375 | -1.75 | -2 | -2.875 | -2.25 |
| $40^{\circ}$ | -1.5 | $-1.875$ | -1.63 | -1.875 | -2.25 | -1.875 | -2.125 | -2.5 | -2.375 |
| $45^{\circ}$ | -1.75 | -1.75 | -1.75 | $-2.125$ | -2 | -2 | $-2.375$ | -2.5 | $-1.625$ |

Table 6 gives details of dimensions required for calculating the rail lengths, where angles are between $30^{\circ}$ and $45^{\circ}$.

## Table 7

Uprights

| Angle of Slope | Size 6 Fitting |  |  | Size 7 Fitting |  |  | Size 8 Fitting |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | u (in.) | v (in.) | w (in.) | u (in.) | v (in.) | w (in.) | u (in.) | v (in.) | w (in.) |
| $30^{\circ}$ | 0.625 | -1.25 | +1 | +0.25 | -1.625 | +1.125 | +1.875 | -1.75 | +1.25 |
| $35^{\circ}$ | 0.375 | -1.375 | +0.75 | +2 | -1.75 | +0.875 | +2.125 | -2 | +1 |
| $40^{\circ}$ | 0.125 | -1.5 | +0.5 | +1.625 | -1.875 | +0.5 | +2.5 | -2.125 | +0.5 |
| $45^{\circ}$ | 1.75 | -1.75 | +0.125 | +1.25 | $-2.125$ | +0.125 | +3 | -2.375 | +0.125 |

Table 7 gives details of dimensions required for calculating the upright lengths, where angles are between $30^{\circ}$ and $45^{\circ}$.

## Table 8

Uprights and rails using Types 55 and 56 - Size 8 only

| Angle | u (in.) | $\mathrm{x}_{1}$ (in.) | w (in.) | $\mathrm{x}_{2}$ (in.) |
| :---: | :---: | :---: | :---: | :---: |
| $20^{\circ}$ to $29^{\circ}$ | -0.75 | -0.75 | -2 | -2 |
| $30^{\circ}$ to $39^{\circ}$ | -0.625 | -0.625 | -2.375 | -2.375 |
| $40^{\circ}$ to $49^{\circ}$ | -0.5 | -0.5 | -2.75 | -2.75 |
| $50^{\circ}$ to $59^{\circ}$ | -0.5 | -0.5 | - | - |
| $60^{\circ}$ to $69^{\circ}$ | -0.375 | -0.375 | - | - |
| $70^{\circ}$ to $79^{\circ}$ | -0.375 | -0.375 | - | - |
| $80^{\circ}$ to $88^{\circ}$ | -0.25 | -0.25 | - | - |

[^0]
## Shelving

Using Type 46 or L46

Table 9
Shelving with carrying rails positioned on the outside of the upright

| Fitting Size | $x$ (in.) |
| :---: | :---: |
| 4 | -3.875 |
| 5 | -5.25 |
| 6 | -6.375 |
| 7 | -7.75 |
| 8 | -9 |
| 9 | -10.875 |

Table 9 gives the dimension ' $x$ ' to be subtracted from overall shelf width ' $L$ ' to give the length of the cross rail in the formula $I=L-x$. (Dimension $x$ accounts for the use of two Type 46 or L46 fittings.)

## Construction of Braces and Struts

Using Types C50, C51, C52 and C53 or LC50, LC51 and LC52

When using multiple pipe sizes in one structure, Types F50-5 to F50-9 or LF50-6 to LF50-8 can all be combined with:
M50-5 to M50-9 LM50-6 to LM50-8 M51-5 to M51-9 LM50-6 to LM50-8 M52-5 to M52-8 LM52-6 to LM52-8 M53-8
to construct combination fittings (i.e. C50-75, C50-85, C51-655, C52-855 and C53-888).

## Table 10

Shelving with carrying rails positioned on the outside of the upright.

| Fitting Size | $x$ (in.) |
| :---: | :---: |
| 4 | -0.5 |
| 5 | -1 |
| 6 | -1 |
| 7 | -1 |
| 8 | -1 |
| 9 | -1.25 |

Table 10 gives details of dimension ' $x$ ' to be subtracted to give the pipe length required for use with two Type F50 or LF50 fittings in the formula I $-\mathrm{L}-2 \mathrm{x}$.

[^1]
## Pallet Racking <br> Using Type 46 or L46

Table 11
Pallet racking with the carrying rails on the inside of the upright

| Fitting Size | $x$ (in.) |
| :---: | :---: |
| $4^{\star}$ | -1.875 |
| $5^{\star}$ | -2.38 |
| $6^{\star}$ | -7.88 |
| 7 | -3.38 |
| 8 | -4 |
| 9 | -5 |

Table 11 gives dimension ' $x$ ' which must be subtracted from the overall width of the carrying rails, to give the length of the cross rail in the formula:
$I=L-x$. (Dimension $x$ accounts for the use of two Type 46 or $L 46$ fittings.)
*Pallet racking is not recommended in less than size 7 pipe.

Table 12
Additional pipe length to reach topmost fitting's termination

| Fitting Size | z (in.) |
| :---: | :---: |
| 3 | +1 |
| 4 | +1.125 |
| 5 | +1.25 |
| 6 | +1.5 |
| 7 | +1.875 |
| 8 | +2 |
| 9 | +2.38 |

The length of the longitudinal member can be calculated from multiples of the length of the bay between the centers of uprights, plus dimension ' $z$ ' in Table 12. Dimension $z$ accounts for the length of pipe needed to go through the topmost fitting to the fitting's termination. This also applies to constructions using fitting Type 45.

Longitudinal pipes are joined using fittings Type 14 or 18 couplings (use of Type 18 is not recommended as a load bearing joint), which must be positioned to occur at the edge of the Type 46 fitting, and must not all occur in the same bay at alternate levels.

[^2] the latter, a gap of 3/4" must be allowed for the set screw fixing.

## Assembly and Installation

## Base and Wall Fixings*

Table 13

| Flange Type | x (in.) |
| :---: | :---: |
| 59 | -0.39 |
| 60 | -0.39 |
| 61 | -0.24 |
| 62 | -0.24 |
| 67 | -0.24 |
| 623 | -0.47 |

Table 13 gives details of the ground fixing dimension ' $x$ ', to be subtracted from the height ' H ' to give the length of the upright ' $h$ '.

Table 14

| Angle | x (in.) |
| :---: | :---: |
| $45^{\circ}$ | -1.5 |
| $50^{\circ}$ | -1.25 |
| $60^{\circ}$ | -1 |
| $65^{\circ}$ | -0.5 |

Table 14 gives details of the ground fixing dimension ' $x$ ', for Type 63-6 only, to be subtracted to give the length of the upright for each angle condition.

Table 15

| Angle | $\mathrm{X}(\mathrm{in})$. |
| :---: | :---: |
| $11^{\circ}$ | -1.5 |
| $15^{\circ}$ | -1.26 |
| $20^{\circ}$ | -0.98 |
| $25^{\circ}$ | -0.79 |
| $30^{\circ}$ | -0.47 |

Table 15 gives details of the ground fixing dimension ' $x$ ' for Type 363 , to be subtracted to give the length of the upright for each angle condition.

Table 16

| Fitting Size | $x(i n)$. |
| :---: | :---: |
| 6 | -0.25 |
| 7 | -0.25 |
| 8 | -0.25 |

Table 16 gives the dimension ' $x$ ' to be subtracted from the length of the upright for fitting Types 64, 65, 67, 68, 115, 265, L68 and L164.

## Table 17

| Fitting Size | x (in.) |
| :---: | :---: |
| 6 | +4.5 |
| 7 | +5 |
| 8 | +5 |

[^3]
## Constructing Circles and Triangles

Worked Example

Slopes and radii present no problem to the Kee Klamp Galvanized railing systems. Fitting Types $27,28,29,30, \mathrm{C} 50, \mathrm{C} 51, \mathrm{C} 52,55$, $56,86,87,88$ and 89 (and the 90 range pedestrian guardrail fittings) are designed to allow for raked handrail while keeping the uprights vertical. Pipe can be bent and radiused to suit most situations. Also, true lengths have to be determined where braces and struts are being used.

Consider the following concrete single flight staircase.

Where
$\mathrm{H}=$ Vertical height from 1st nosing to last nosing.
$h=$ Vertical height from ground level to 1st nosing.
$\mathrm{I}=$ Horizontal dimension from 1st nosing to last nosing.
$\mathrm{L}=$ Hypotenuse dimension (Pitch Line) from 1st nosing to last nosing.

| Known Data |  | Formula for Side and Angle |  |
| :---: | :--- | :--- | :--- |
| $H \& L$ | $I=\sqrt{ }\left(L^{2}-H^{2}\right)$ | $\operatorname{Sin} B=\frac{H}{L}$ | $C=90^{\circ}-B$ |
| $L \& I$ | $H=\sqrt{ }\left(L^{2}-I^{2}\right)$ | $\operatorname{Sin} C=\frac{1}{L}$ | $B=90^{\circ}-C$ |
| $H \& I$ | $H=\sqrt{ }\left(H^{2}-I^{2}\right)$ | Tan $B=\frac{H}{I}$ | $C=90^{\circ}-B$ |

Note: The table can be used to solve angles and true lengths for braces and struts.

## Step 1

From a simple site survey or information from a working drawing, obtain the following dimensions.

Note: For greater accuracy, vertical dimensions should be taken by means of a Dumpy Level or a Theodolite.
$H=$ vertical height from the 1 st nosing to the last $(140 \mathrm{~cm})$
$\mathrm{L}=$ pitch line, the diagonal dimension from the 1st nosing to the last (240cm).

## Step 2

From the table to determine angle $B$ we use;
$\operatorname{Sin} B=55 / 96$, Angle $B=35^{\circ}$

[^4] 12 units traversed horizontally, 1 unit of vertical height is obtained.

## Shelving

Using Type 46 or L46

Table 9
Shelving with carrying rails positioned on the outside of the upright

| Fitting Size | $x$ (in.) |
| :---: | :---: |
| 4 | -3.875 |
| 5 | -5.25 |
| 6 | -6.375 |
| 7 | -7.75 |
| 8 | -9 |
| 9 | -10.875 |

Table 9 gives the dimension ' $x$ ' to be subtracted from overall shelf width ' $L$ ' to give the length of the cross rail in the formula $I=L-x$. (Dimension $x$ accounts for the use of two Type 46 or L46 fittings.)

## Construction of Braces and Struts

Using Types C50, C51, C52 and C53 or LC50, LC51 and LC52

When using multiple pipe sizes in one structure, Types F50-5 to F50-9 or LF50-6 to LF50-8 can all be combined with:
M50-5 to M50-9 LM50-6 to LM50-8 M51-5 to M51-9 LM50-6 to LM50-8 M52-5 to M52-8 LM52-6 to LM52-8 M53-8
to construct combination fittings (i.e. C50-75, C50-85, C51-655, C52-855 and C53-888).

## Table 10

Shelving with carrying rails positioned on the outside of the upright.

| Fitting Size | $x$ (in.) |
| :---: | :---: |
| 4 | -0.5 |
| 5 | -1 |
| 6 | -1 |
| 7 | -1 |
| 8 | -1 |
| 9 | -1.25 |

Table 10 gives details of dimension ' $x$ ' to be subtracted to give the pipe length required for use with two Type F50 or LF50 fittings in the formula I $-\mathrm{L}-2 \mathrm{x}$.

[^5]
## Pallet Racking <br> Using Type 46 or L46

Table 11
Pallet racking with the carrying rails on the inside of the upright

| Fitting Size | $x$ (in.) |
| :---: | :---: |
| $4^{\star}$ | -1.875 |
| $5^{\star}$ | -2.38 |
| $6^{\star}$ | -7.88 |
| 7 | -3.38 |
| 8 | -4 |
| 9 | -5 |

Table 11 gives dimension ' $x$ ' which must be subtracted from the overall width of the carrying rails, to give the length of the cross rail in the formula:
$I=L-x$. (Dimension $x$ accounts for the use of two Type 46 or $L 46$ fittings.)
*Pallet racking is not recommended in less than size 7 pipe.

Table 12
Additional pipe length to reach topmost fitting's termination

| Fitting Size | z (in.) |
| :---: | :---: |
| 3 | +1 |
| 4 | +1.125 |
| 5 | +1.25 |
| 6 | +1.5 |
| 7 | +1.875 |
| 8 | +2 |
| 9 | +2.38 |

The length of the longitudinal member can be calculated from multiples of the length of the bay between the centers of uprights, plus dimension ' $z$ ' in Table 12. Dimension $z$ accounts for the length of pipe needed to go through the topmost fitting to the fitting's termination. This also applies to constructions using fitting Type 45.

Longitudinal pipes are joined using fittings Type 14 or 18 couplings (use of Type 18 is not recommended as a load bearing joint), which must be positioned to occur at the edge of the Type 46 fitting, and must not all occur in the same bay at alternate levels.

[^6]
## Assembly and Installation

## Base and Wall Fixings*

Table 13

| Flange Type | x (in.) |
| :---: | :---: |
| 59 | -0.39 |
| 60 | -0.39 |
| 61 | -0.24 |
| 62 | -0.24 |
| 67 | -0.24 |
| 623 | -0.47 |

Table 13 gives details of the ground fixing dimension ' $x$ ', to be subtracted from the height ' H ' to give the length of the upright ' $h$ '.

Table 14

| Angle | x (in.) |
| :---: | :---: |
| $45^{\circ}$ | -1.5 |
| $50^{\circ}$ | -1.25 |
| $60^{\circ}$ | -1 |
| $65^{\circ}$ | -0.5 |

Table 14 gives details of the ground fixing dimension ' $x$ ', for Type 63-6 only, to be subtracted to give the length of the upright for each angle condition.

Table 15

| Angle | $\mathrm{X}(\mathrm{in})$. |
| :---: | :---: |
| $11^{\circ}$ | -1.5 |
| $15^{\circ}$ | -1.26 |
| $20^{\circ}$ | -0.98 |
| $25^{\circ}$ | -0.79 |
| $30^{\circ}$ | -0.47 |

Table 15 gives details of the ground fixing dimension ' $x$ ' for Type 363 , to be subtracted to give the length of the upright for each angle condition.

Table 16

| Fitting Size | $x(i n)$. |
| :---: | :---: |
| 6 | -0.25 |
| 7 | -0.25 |
| 8 | -0.25 |

Table 16 gives the dimension ' $x$ ' to be subtracted from the length of the upright for fitting Types 64, 65, 67, 68, 115, 265, L68 and L164.

Table 17

| Fitting Size | x (in.) |
| :---: | :---: |
| 6 | +4.5 |
| 7 | +5 |
| 8 | +5 |

[^7]
## Constructing Circles and Triangles

Worked Example

Slopes and radii present no problem to the Kee Klamp Galvanized railing systems. Fitting Types $27,28,29,30, \mathrm{C} 50, \mathrm{C} 51, \mathrm{C} 52,55$, $56,86,87,88$ and 89 (and the 90 range pedestrian guardrail fittings) are designed to allow for raked handrail while keeping the uprights vertical. Pipe can be bent and radiused to suit most situations. Also, true lengths have to be determined where braces and struts are being used.

Consider the following concrete single flight staircase.

Where
$\mathrm{H}=$ Vertical height from 1st nosing to last nosing.
$h=$ Vertical height from ground level to 1st nosing.
$\mathrm{I}=$ Horizontal dimension from 1st nosing to last nosing.
$\mathrm{L}=$ Hypotenuse dimension (Pitch Line) from 1st nosing to last nosing.

| Known Data |  | Formula for Side and Angle |  |
| :---: | :--- | :--- | :--- |
| $H \& L$ | $I=\sqrt{ }\left(L^{2}-H^{2}\right)$ | $\operatorname{Sin} B=\frac{H}{L}$ | $C=90^{\circ}-B$ |
| $L \& I$ | $H=\sqrt{ }\left(L^{2}-I^{2}\right)$ | $\operatorname{Sin} C=\frac{1}{L}$ | $B=90^{\circ}-C$ |
| $H \& I$ | $H=\sqrt{ }\left(H^{2}-I^{2}\right)$ | Tan $B=\frac{H}{I}$ | $C=90^{\circ}-B$ |

Note: The table can be used to solve angles and true lengths for braces and struts.

## Step 1

From a simple site survey or information from a working drawing, obtain the following dimensions.

Note: For greater accuracy, vertical dimensions should be taken by means of a Dumpy Level or a Theodolite.
$H=$ vertical height from the 1 st nosing to the last $(140 \mathrm{~cm})$
$\mathrm{L}=$ pitch line, the diagonal dimension from the 1st nosing to the last (240cm).

## Step 2

From the table to determine angle $B$ we use;
$\operatorname{Sin} B=55 / 96$, Angle $B=35^{\circ}$

Ramps can be dealt with in a similar way. Most ramps have a stated gradient (e.g. 1:12); for every 12 units traversed horizontally, 1 unit of vertical height is obtained.

## How to Make Jigs for Railing Posts

Set-up

## Step 1

Start with pre-cut pipe.

## Step 2

Measure and locate fittings on first post only.

## Step 3

Lay post horizontal, and insert two pieces of scrap pipe. This is all that's involved in setting up your jig! From this point, duplicate posts can be produced by unskilled labor, without further measuring, at the rate of 20-30 posts per hour.

## Utilising Jigs for Railing Posts

Production

## Step 1

Set top and middle fittings in place, unfastened, on the two pieces of scrap pipe.

## Step 2

Insert pre-cut pipe into fittings, then add flange.

## Step 3

Simply tighten set screws, then lift off.

## Wire Mesh Infill

Infilling is normally constructed from 2" x 2" $0.13^{\prime \prime}, 1^{\prime \prime} \times 1^{\prime \prime} \times$ 0.13 " or 2 " $\times 1$ " $\times 0.13^{\prime \prime}$ wire mesh welded to a 0.31 " Rod frame, and is fixed into position using standard Fitting Types 81 and 82. (NB: Types 81 and 82 require cut outs on mesh less than 1.26" square.)

Table 20

| Fitting Size | $\mathrm{x}(\mathrm{in})$. |
| :---: | :---: |
| 5 | -2.36 |
| 6 | -2.99 |
| 7 | -3.39 |
| 8 | -3.50 |
| 9 | -3.86 |

Table 20 gives the dimensions to be subtracted from the centre dimensions ' $L$ ' and ' $D$ ' of the structure to give the formulae $\mathrm{I}=\mathrm{L}-\mathrm{x}$ and $\mathrm{d}=\mathrm{D}-\mathrm{x}$.

Warning: The spacing of panel clip Types 81 and 82 should not exceed 17.72" centers. The safety attachment incorporated in the panel clip Types 81 and 82 cannot be used with mesh less than 1.26".

## Pipe Bending

Table 21

| Fitting Size | $\mathbf{R}$ (in.) |
| :---: | :---: |
| 3 | 2.24 |
| 4 | 2.24 |
| 5 | 3.54 or 3.86 |
| 6 | 4.02 |
| 7 | 5.31 |
| 8 | 5.98 |
| 9 | 7.99 |

Table 21 gives details of standard radius 'R' of the pipe bent by Kee Safety Ltd. If the standard radii below are not suitable, pipe sizes 5 to 9 can be rolled to any radius above a minimum of $19.69^{\prime \prime}$.

## Galvanized Racking Load Tables

Table 22
Beam load tables (lbs.)

| Span | Fitting Size |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 5 | 6 | 7 | 8 | 9 |
|  | Pipe Size |  |  |  |  |
|  | 3/4" N.B. | 1" N.B. | 1-1/4" N.B. | 1-1/2" N.B. | 2" N.B. |
| $1 '$ | 1658 | 3123 | 5516 | 7669 | 13180 |
| $2^{\prime}$ | 829 | 1562 | 2758 | 3834 | 6590 |
| $3^{\prime}$ | 553 | 1041 | 1838 | 2556 | 4393 |
| $3^{\prime \prime} 6^{\prime \prime}$ | 474 | 892 | 1576 | 2191 | 3766 |
| $4{ }^{\prime}$ | 414 | 781 | 1379 | 1917 | 3295 |
| 4'6" | 368 | 694 | 1226 | 1704 | 2929 |
| $5^{\prime}$ | 332 | 625 | 1103 | 1534 | 2636 |
| 5' 6" | 302 | 568 | 1003 | 1394 | 2396 |
| $6{ }^{\prime}$ | 277 | 520 | 919 | 1278 | 2197 |
| 6' 6" | 255 | 481 | 849 | 1180 | 2028 |
| $7{ }^{\prime}$ | 237 | 446 | 788 | 1096 | 1883 |
| 7'6" | 221 | 417 | 735 | 1023 | 1757 |
| $8{ }^{\prime}$ | 207 | 390 | 690 | 959 | 1648 |
| $9{ }^{\prime}$ | 184 | 347 | 613 | 852 | 1464 |

|  | 6 | 7 | 8 | 9 |
|  | Pipe Size |  |  |  |
|  | 1" N.B. | 1-1/4" N.B. | 1-1/2" N.B. | 2" N.B. |
| $1 '$ | 3081 | 3413 | 10369 | 17966 |
| $2^{\prime}$ | 984 | 2198 | 3494 | 7510 |
| $3 '$ | 438 | 975 | 1551 | 3337 |
| $3^{\prime \prime} 6^{\prime \prime}$ | 321 | 717 | 1141 | 2453 |
| $4^{\prime}$ | 245 | 548 | 872 | 1877 |
| 4' 6" | - | 434 | 690 | 1483 |
| $5^{\prime}$ | - | 352 | 557 | 1200 |
| $5^{\prime} 6^{\prime \prime}$ | - | 291 | 462 | 992 |
| $6{ }^{\prime}$ | - | 243 | 386 | 833 |
| $6^{\prime} 6^{\prime \prime}$ | - | 208 | 329 | 710 |
| 71 | - | 178 | 283 | 613 |
| 7' $6^{\prime \prime}$ | - | - | 248 | 534 |
| $8{ }^{\prime}$ | - | - | 217 | 469 |
| $9^{\prime}$ | - | - | 171 | 370 |
| $10^{\prime}$ | - | - | - | 300 |

Values shown have a safety factor of 2 built into them and are based on the limit state of the material used.

The values in Table 25 are an indication of a UDL that a rack consisting of two continuous support pipes can support.

For uneven load distributions, the required pipe size must be determined by standard bending moment and deflection calculations assuming the Kee Lite joint to give a simply supported beam.

At loads greater than $1700 \mathrm{lbs} .^{*}$ consideration must be given to grubscrew slippage. (*A safety factor of 2 being applied in this instance.)

Load Tables

Values shown have a safety factor of 2 built into them and are based on the limit state of the material used.

Table 27 gives an indication only of the safe load, in pounds, that may be carried between the above restraints by single Schedule 40 pipe when used as uprights.

Table reflects a safety factor of 2:1

At loads greater than 2000lbs. consideration must be given to grubscrew slippage (a safety factor of 2 being included in this instance).

## Test Report:

## Vibration of Kee Klamp ${ }^{\circledR}$ Assemblies

Exhaustive tests on samples of standard size 7 Kee Klamp fittings were performed by an independent research laboratory. The purpose of the test was to evaluate the use of either standard set screws or self-locking set screws.

## Test Arrangement

A "Tee" section test assembly was made using three 12 ft . lengths of Galvanized size 7 standard pipe held together by a three socket tee fitting (Type 25-7). The vertical leg of the test assembly was supported in a standard railing flange (Type 62-7). The completed assembly was then rigidly attached to the vibration table.

The test assembly was initially assembled using standard set screws and tested in this configuration. The standard set screws were then replaced with the self-locking screws and the tests repeated.

## Test Procedure

The test was conducted on a Ling 667 Kg Electromagnetic Vibration Table. The table was programmed to perform a resonance search between 25 and 350 Hz and resonant frequencies were recorded and shown in Table 28.

Table 28
Test Results

| Resonance Frequencies | Q Factor | Running Time |
| :---: | :---: | :---: |
| 74 | 1.27 | Nil |
| 106 | 1.27 | Nil |
| 158 | 1.53 | 6 hours |
| 200 | 1.8 | 6 hours |
| 221 | 5 | 6 hours |
| 295 | 9 | 6 hours |

During the resonance search, amplification factors $(\mathrm{Q})$ were measured at each resonant frequency, the point of reference being the end of one horizontal pipe. The table was then held at one of the resonant frequencies, set in motion with a controlled acceleration level of 4 g , and ran for a period of six hours. This was repeated for three more resonant frequencies in descending order of Q factor.

Furthermore, during the twenty-four hours of vibration at the four resonant frequencies above, no signs of loosening with either type of attachment screw occurred.

Comprehensive data showing the telescopic relationship between pipes to BS EN 10255 (ISO 65) is shown in Table 29.

## Kee Safety: Your Fall Protection Experts

At Kee Safety, education is the foundation of safety. Our team is dedicated to assisting you with every aspect of your project, regardless of its scope. We work closely with you to customize our Fall Protection Systems to meet your requirements and ensure the safety of your employees, contractors, and facility. Our commitment to your safety doesn't end with installation-we'll be there at every step, from system inspection and assessment to ongoing service requirements.
